I find it hard to believe that
this is the true appearance
of an intelligent reptilian.
It's body with the long thick
tail looks primitive and
dinosaurian. Its encephalization
quotient would not be high
enough. - I also wonder
how its tight-fitting
body-suit stretches over
the protrusions on the back.

Aliens may consider humans to be wild animals whose emotional nature
makes them unpredictable, capable of becoming violent within seconds.
Our fear, distrust and resentment may make us dangerous to them.
Are we civilized beings? You can see the need to employ mass-paralysis,
particularly on armed soldiers with egos and emotions.
But don't automatically assume 'alien' to mean extraterrestrial life forms, independently
evolved in other star systems. The humanish-mongoloid or Nordic-appearance
of some of these beings may indicate they are
actually technologically superior human
civilizations from other timelines or the future.

- 6)-Small flaps of skin for external ears.
- 7)-Lips, teeth & nails reduced or absent.

Neonates of the human species are already being produced.

"Hybrids" are basically neotenized humans with some Gray genetics spliced in.

A. of age 16
July, 1981 The day had been hot & clear ~85 or 90°F
It was dark, the sky clear, temp ~75°

Suddenly clouds came in and it got really windy.

Thinking a storm was about to break, A. turned
& began to run to the house. His mother's light
was off—she'd gone to bed. The door was open
to air out the house. He had been playing
frisbee w/ the dog & had just finished
playing racquet ball. The dog ran inside.

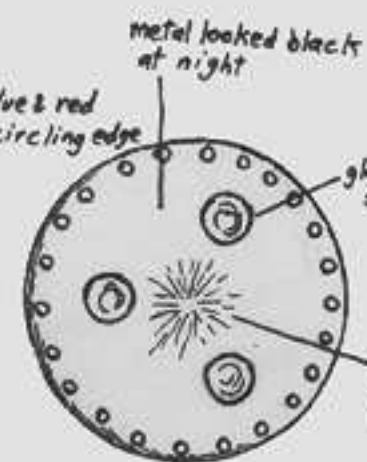

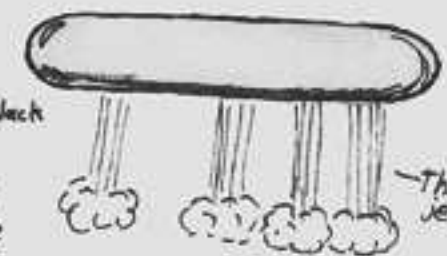

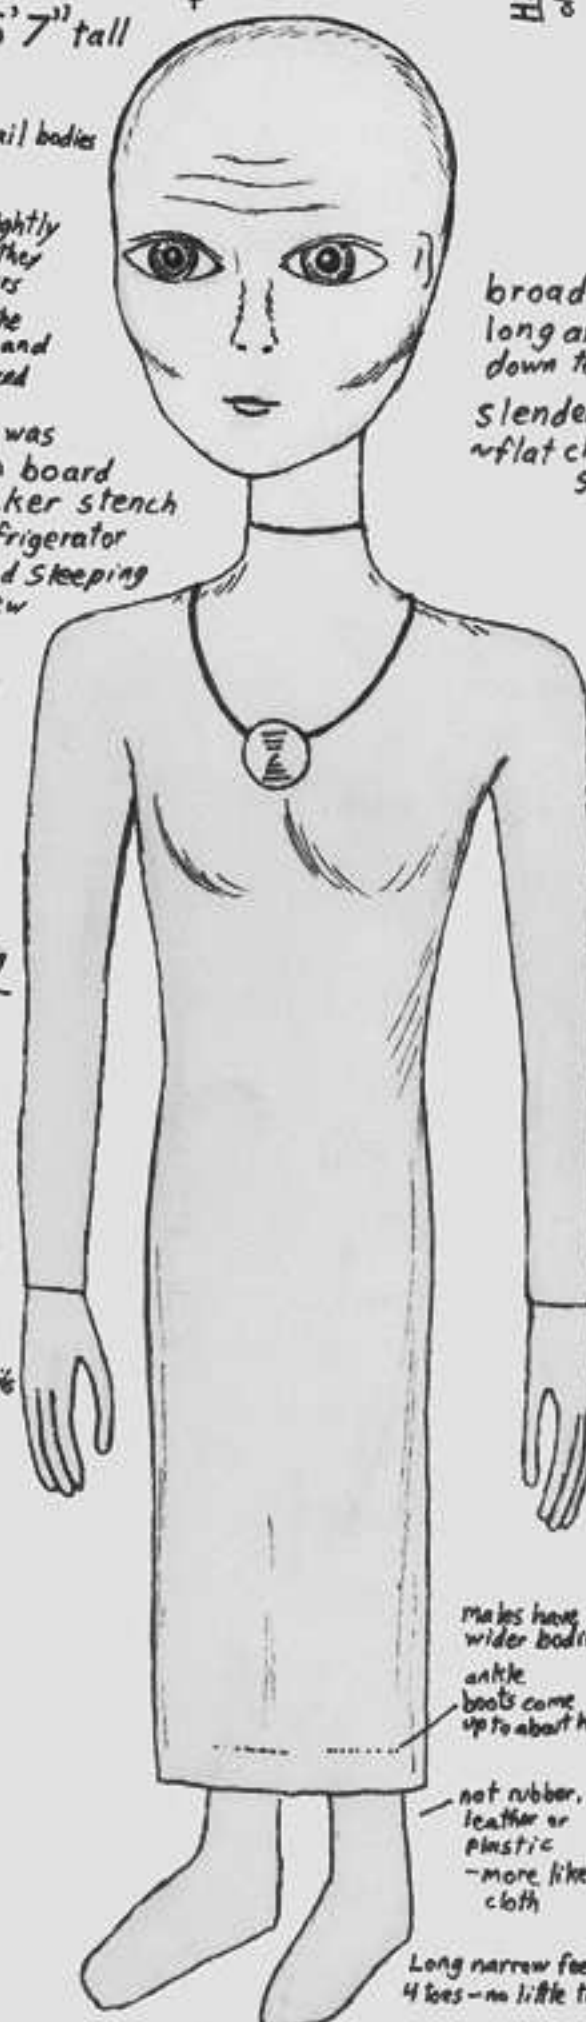

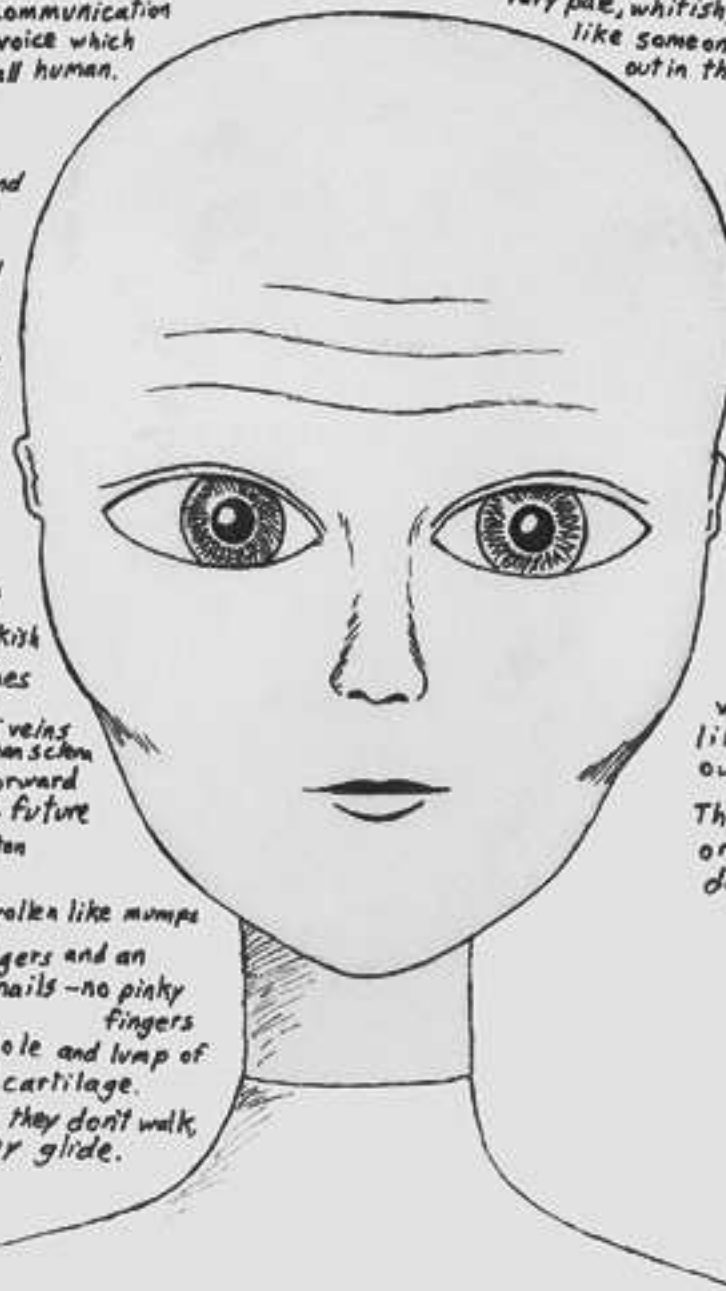

A. was running to get in before the rainstorm
& was suddenly paralyzed—when the clouds
came in there was a bright light in them.
—red & blue lights and a ~cricket sound

Then a hot light came down and A. was
rising through it. He could see the house
and Seattle city lights down below.

—Suddenly he was inside the craft, it was
dark and there seemed to be cat eyes
staring at him.

when he woke up the next morning he
was in bed w/ shoes on—he remembered
throwing the racket over the fence before
running in. The ground was dry outside—it
hadn't rained.

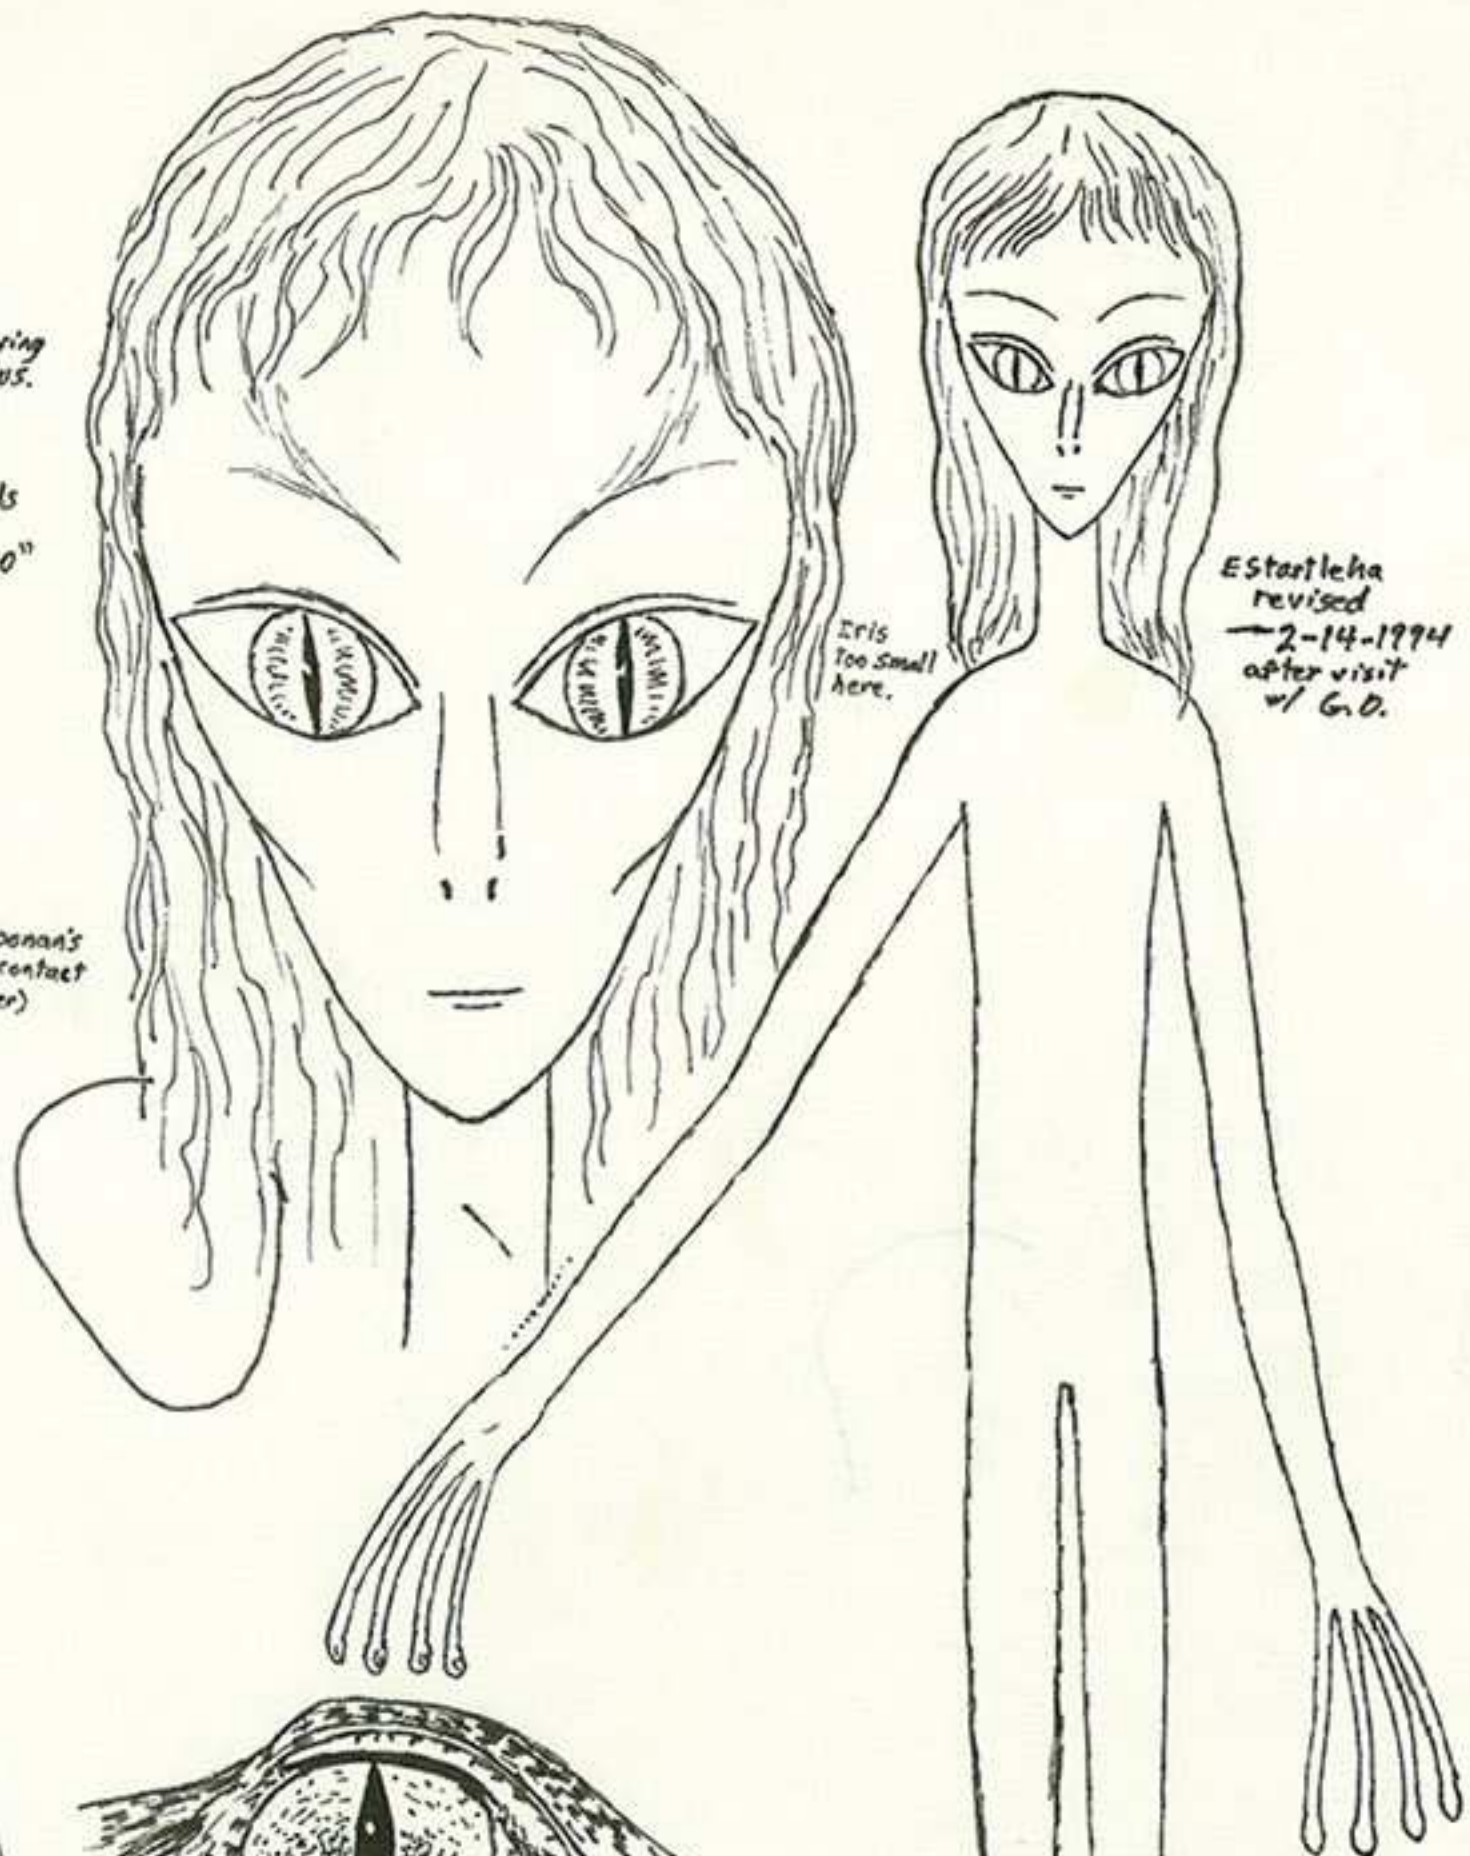

(A. seemed to be gone for a week, but
was taken back to the same night
and returned.) ~ Temporal incongruity
A. got very ill & tired and had to go to the
hospital three days after the abduction.

Cat-eyed Grays

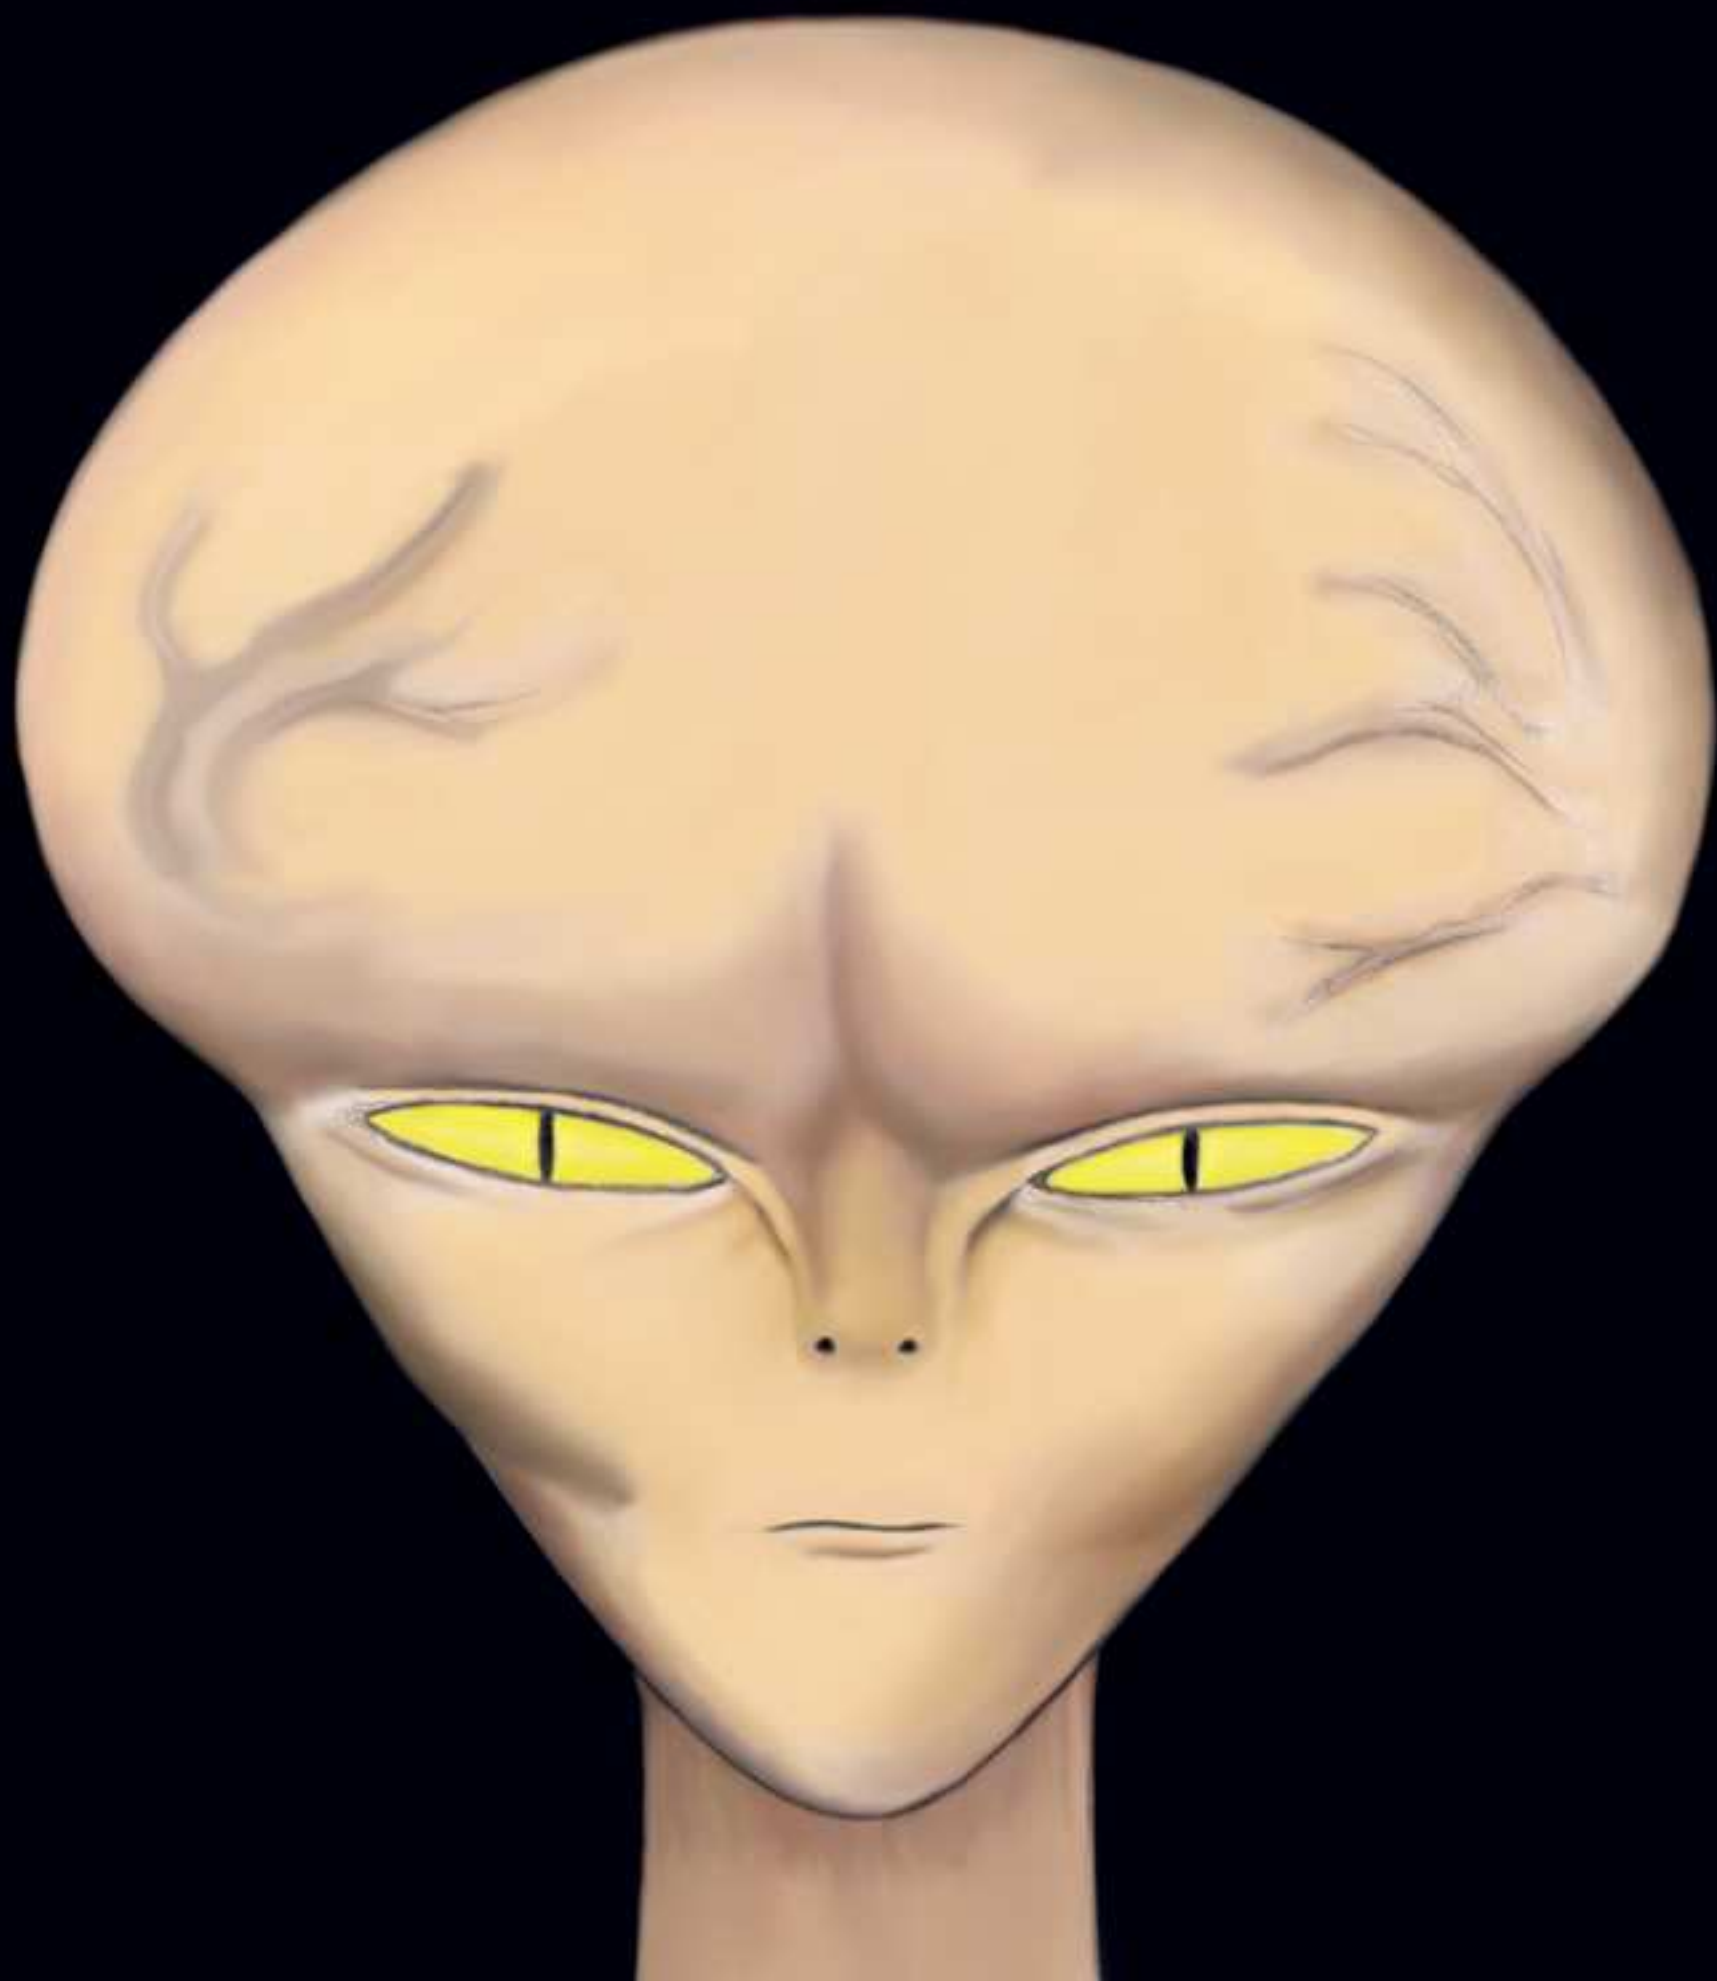

based on May 1998 interviews with R.L.

Wears a black cloak with a cowl hood.
 Hood slightly pointed at top toward the back.
 Opening is wide - could see ears **if** it had them, which it doesn't.
 Can see face when looking right at it from the front.
 Face is **not** deeply recessed in shadow.
 Pale, sickly white, hollow beneath the cheek bone.
 Unbelievably spindly. Skinny kid w/ cloak.
 Size of a small child.
 R.L. does not recall seeing a belt.
 The cloak likely opens down the front.
 Cloak has sleeves with hands visible.
 Smooth leather skin on hands.
 Skin is reptilian but scales are too small to see without a magnifying glass.
 Hands have 4 webbed fingers with lizard claws, like a blunt talon that can scratch.
 Has scratched R.L.'s arms and legs.

Can only speak by making squeaking sounds to each other.
 Seem to have no sexuality, no gender.
 Can move very fast when they want to.
 Move like insects, 30 to 40 ft. in ~1/2 second.
 Seems like no mammal can move that fast.
 Had to live underground for a long time on the homeworld.
 In October 1990 R.L. chased these beings out.
 Faded out in just under a second.
 Can fade in and out - dematerialize like their craft.
 Sounds exactly like a record needle scratching a record, or like zipping a zipper very fast.
 Can pass through solid objects like sliding glass doors.

R.L. suddenly feels very cooperative when they get him out of bed.
 Cat-eyed Grays are like servants or worker drones for the male Hybrid (Sassani?) leader. When the Hybrid is present, supervising them, the cat-eyed Grays behave themselves. But... they do their own thing on the side.
 They operate militaristically when acting independently of the Hybrid and can be very harsh if you don't comply.
 R.L. is "just a thing to them."

It is time for us to merge with the mainstream of civilization. Time to join the galactic/transdimensional community of intelligent life.

Our isolation and separation will end. We are not alone. urgency/necessity

Praying Mantis based on interview w/ F.K. 2-9-1995

Mantis have been at war with Reptilians, human forms (Nordics, Pleiadians) and Gray physicians—because the mantises attempted to clone their own work force of small gray worker beings taken from the Grays—a SyBU slave work force

skin color: sage green / green grey putty color or light beigey cocoa
black feelers
slight fold or crease
very thin crease running along next to eye

Nordic infants resemble adult neonate/hybrids

F.K. has seen a small 4ft (previously estimated 4 1/2 ft) mantis an 8ft female and a 10ft male mantis
The sage green male said the mantises wanted to interbreed with humans—to acquire emotions and intellect of humans for their evolution & survival

Exploration strategy:
(source—F.K.) Beings first search for a suitable world & timeline with "thought travel" then take their ships there physically by bending time—(folding space) moving "diagonally" thru time instead of straight thru space like rockets do.

D.E. Goddess-Female Deity—Bearer of Life
Creator of Heaven / Earth / all of Humankind
Serpent curls often represent female deity
Isis / Estarte / Ishtar / Innanna
Estarte / Leah?

D.E. saw complete compassion in the eyes of the small ETs (Grays) but no emotion—love comes from the heart—a higher place
—Love is not just a feeling or emotion like fear

D.E. has also seen blue, tall beings and light beings or columns of light.

N.K. has seen 3 types of Grays
9-10 ft tall ~4 or 5 fingers
6-7 ft tall ~2 or 3 fingers
3-4 or 5 ft tall ~4 or 5 fingers
The little Grays—workers live only about 10, 12, 15 years
They fly around the universe in spacecraft as workers, messengers, pilots & escorts.

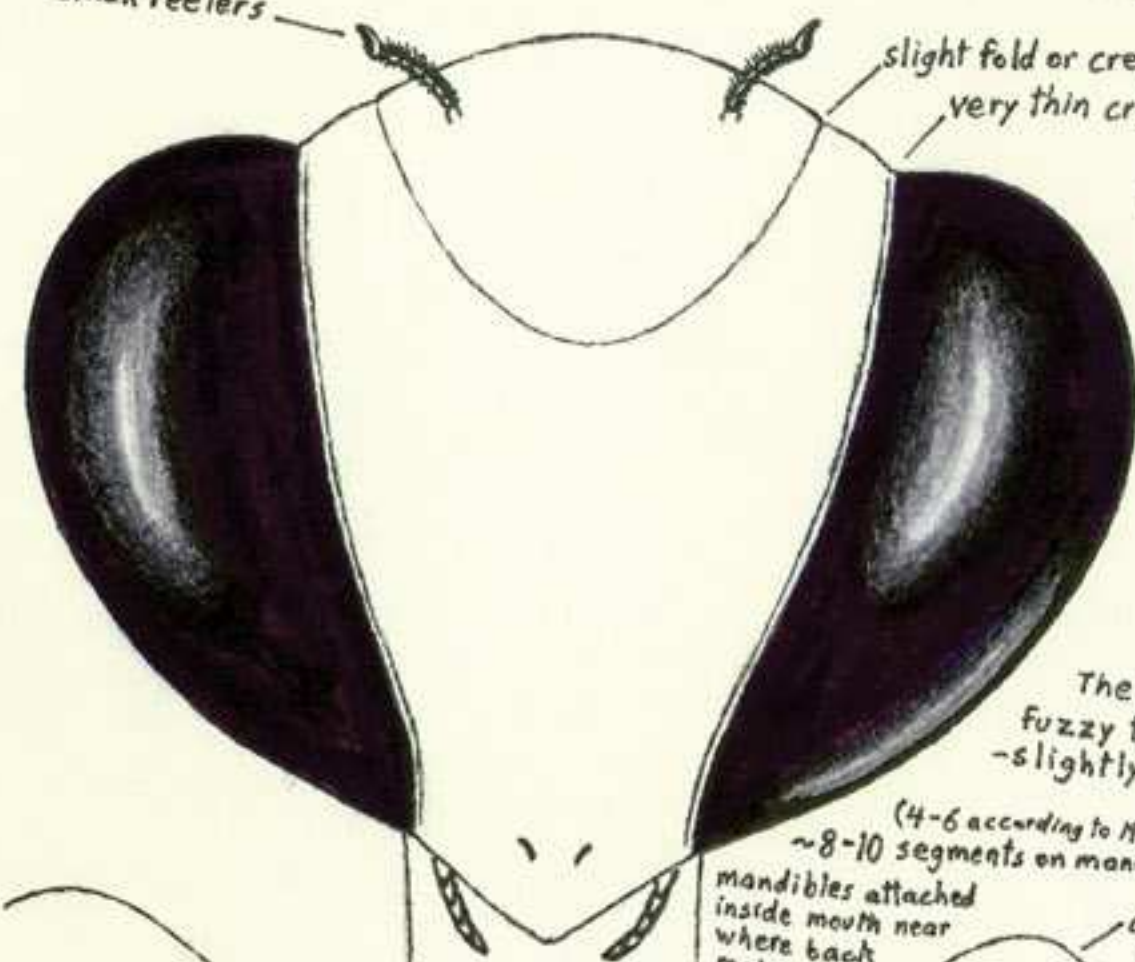

In old age they are retired to computer or lab work. Then they are placed in a glass cage where the physical body is dissolved by heat radiation into a puddle resembling liquid mercury—and the atoms are recycled for the growth of new Gray-workers. This is not a sad occasion—it is like replacing a battery.

The physicians—life givers
—pure intellect, humanity
—pleasant, scientific, humanish demeanor
live 200 years—used to live 400 to 500 years
5ft tall Grays (Cover of Communion)
peace keepers / peace makers
live 250-300 years

The Laboratory:
③ The Laboratory:
Tall, fair, well-proportioned, refined-featured Humans all of same rank—equals working cooperatively on a variety of science experiments. Wearing silver mesh suits or lab coats.
Grays—worker beings moving robotically—running around—cleaning test tubes, bringing apparatus, etc.

The astral body is a complete energy/information template/blueprint of the physical body.
② The Day Care / Museum (i.e. controlled air temp. etc.) Human looking children appearing 1-3 years old happy, intelligent, understanding and manipulative—could understand and manipulate mathematical symbols and equations—playing w/ colored balls, etc.

F.K. taken on trip in "astral body"—could just see its transparent, shimmering outside surface and the world behind it—sparked like talcum powder—the same one her original physical body wore in bed.
① The Nursery:
Human looking babies of all races—all skin colors we see on Earth but tending toward lighter shades. Larger craniums and large, slanted, almond-shaped eyes—in little beds—infant Nordics and other "Extraterrestrial Human-Forms"—playing w/ colored balls, etc.

The mantis have a little tiny fuzzy tongue for sensory purposes
—slightly darker sage green & reddish brown underneath
(4-6 according to 1994 recollection)
~8-10 segments on mandibles

mandibles attached inside mouth near where back molars would be

Can raise shoulders up to here in a very jerky motion when irate or upset—moves like a break-dancer
also makes a high-pitched screeching sound like scratching a chalk board

Smooth, tight, rubbery skin—like shark skin

opposing thumb

little fuzzy velcro pads

grasping fingers

left palm

Mantis has a smooth flat behind—no buttocks or crotch

Legs are straight and elongated—calves do not bulge

right foot front view Can fold or lay arms and legs flat

Legs are very elongated and make up more than half of the creature's body mass

brownish yellow claws

Semi-upright posture

Male & Female genitalia look ~the same except when the male becomes upset or aroused

Female has two points which come out like little nipples when she is ready to suckle her young mantises.

Revised Mantis
11/20/96

Shiny black eyes.

Dull, leathery skin w/
folds or plates.

Neutral gray color w/
a tinge of olive brown.
Not dark, but not
very light either.

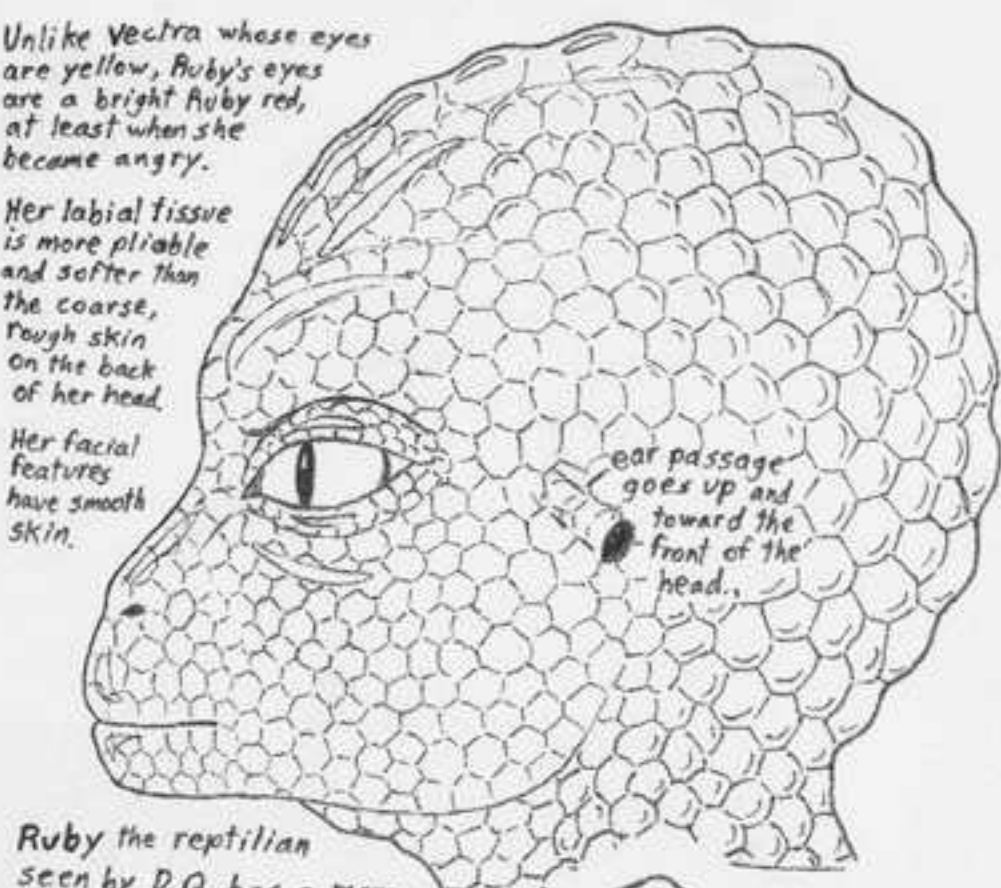

Unlike Vectra whose eyes are yellow, Ruby's eyes are a bright Ruby red, at least when she became angry.

Her labial tissue is more pliable and softer than the coarse, rough skin on the back of her head.

Her facial features have smooth skin.

Ruby the reptilian seen by D.Q. has a more pronounced snout or muzzle than Vectra seen by G.D.

ear passage goes up and toward the front of the head.

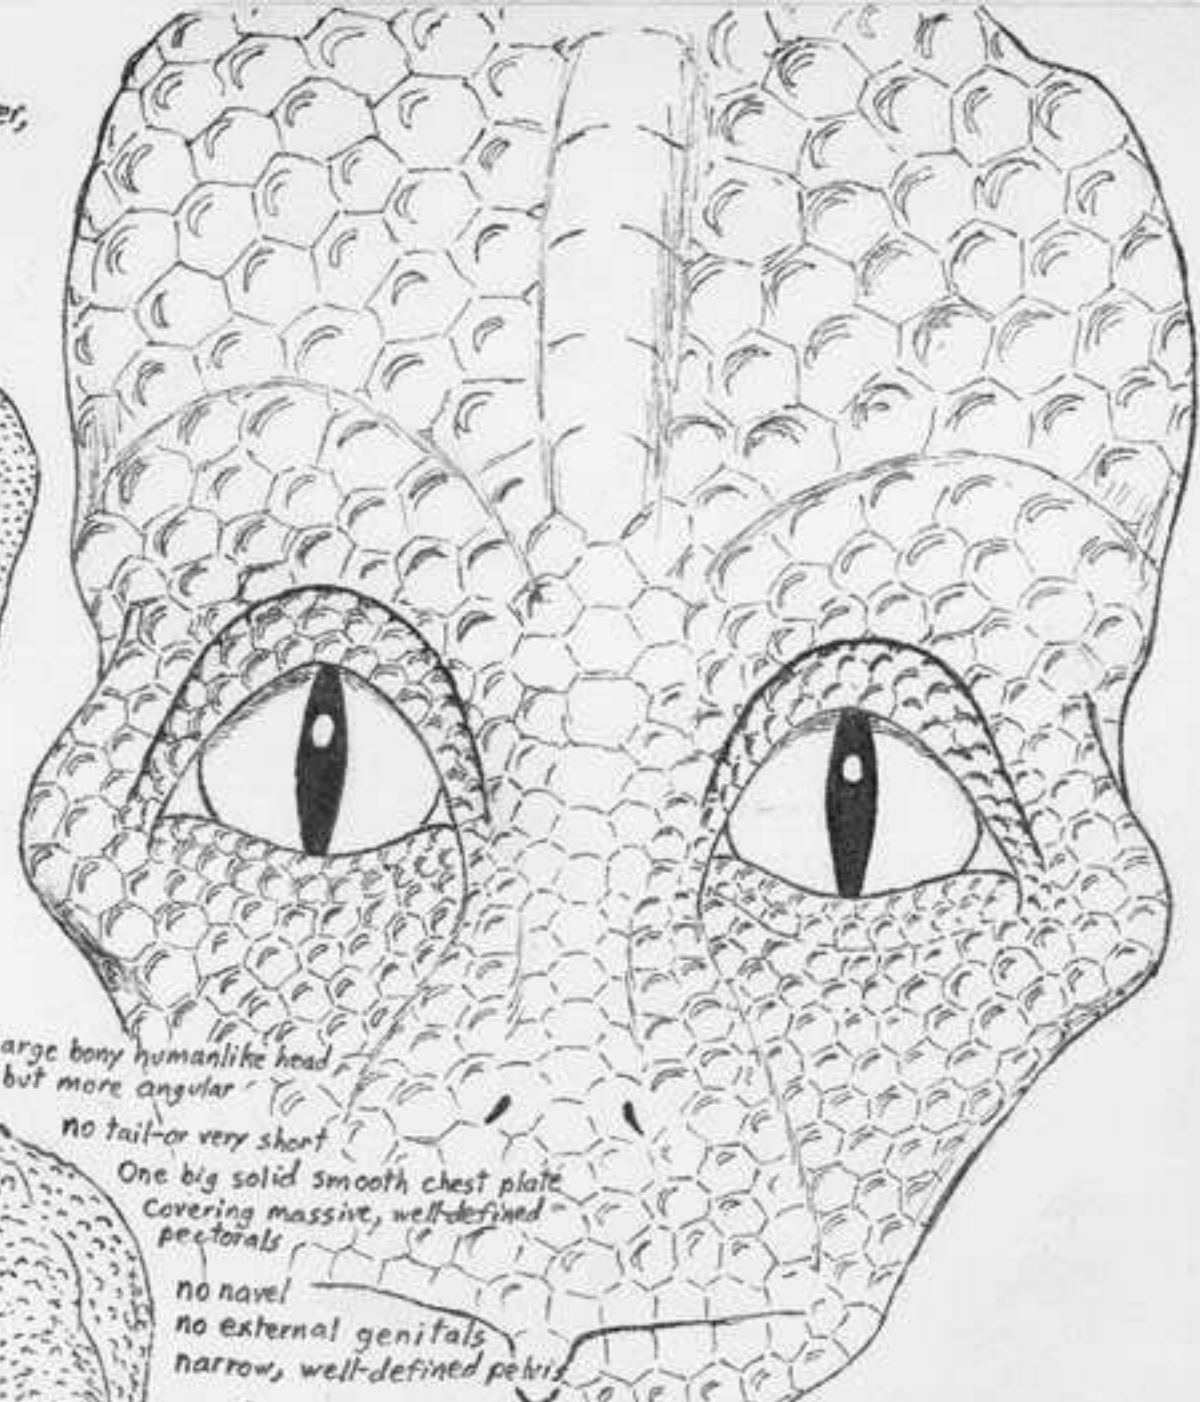

"Vectra"

Following Garnette's first reptilian encounter, Estartleha told her, "Soon I will tell you about Vectra."

-Is Vectra a species, a specific reptilian, or something else?

almost brown
pea green
more brown in the shadows on face
the smaller scales are darker brown
the larger/raised scales are yellowish pea green

← Original sketch by eyewitness, Garnette Doonan

large bony humanlike head but more angular
no tail or very short

One big solid smooth chest plate covering massive, well-defined pectorals

no navel
no external genitals
narrow, well-defined pelvis

"Vectra" more brown than green
brown with a tinge of green
~muddy green - more brownish similar to dark bands on an iguana's tail.

rounded butt
Arms slightly longer than human arms.

Bump or idea of a nose not as prominent as a human nose but more so than a typical reptilian

He sensed G.D. and in a single fluid movement spun his entire body toward her and went into a deep crouch with his arms and legs spread and his knees thrown out. He was defending his space very animalistic, and would have killed her.

Seen from a distance of ~16' no visible white in eye - yellow with a slit pupil prominence for cheek bone indentation at temple. smooth or slightly bumpy ridge

The creature was ~15 or 16 feet away in a room with yellow light.

deep-set, rounded yellow globe of an eye.
heavy eyelid forms a deep crease with prominent brow ridge
even the beak was covered with bumps.

~conical bumps ~1cm high on head, neck and shoulders.
-resembles skin on head & neck of green iguana.

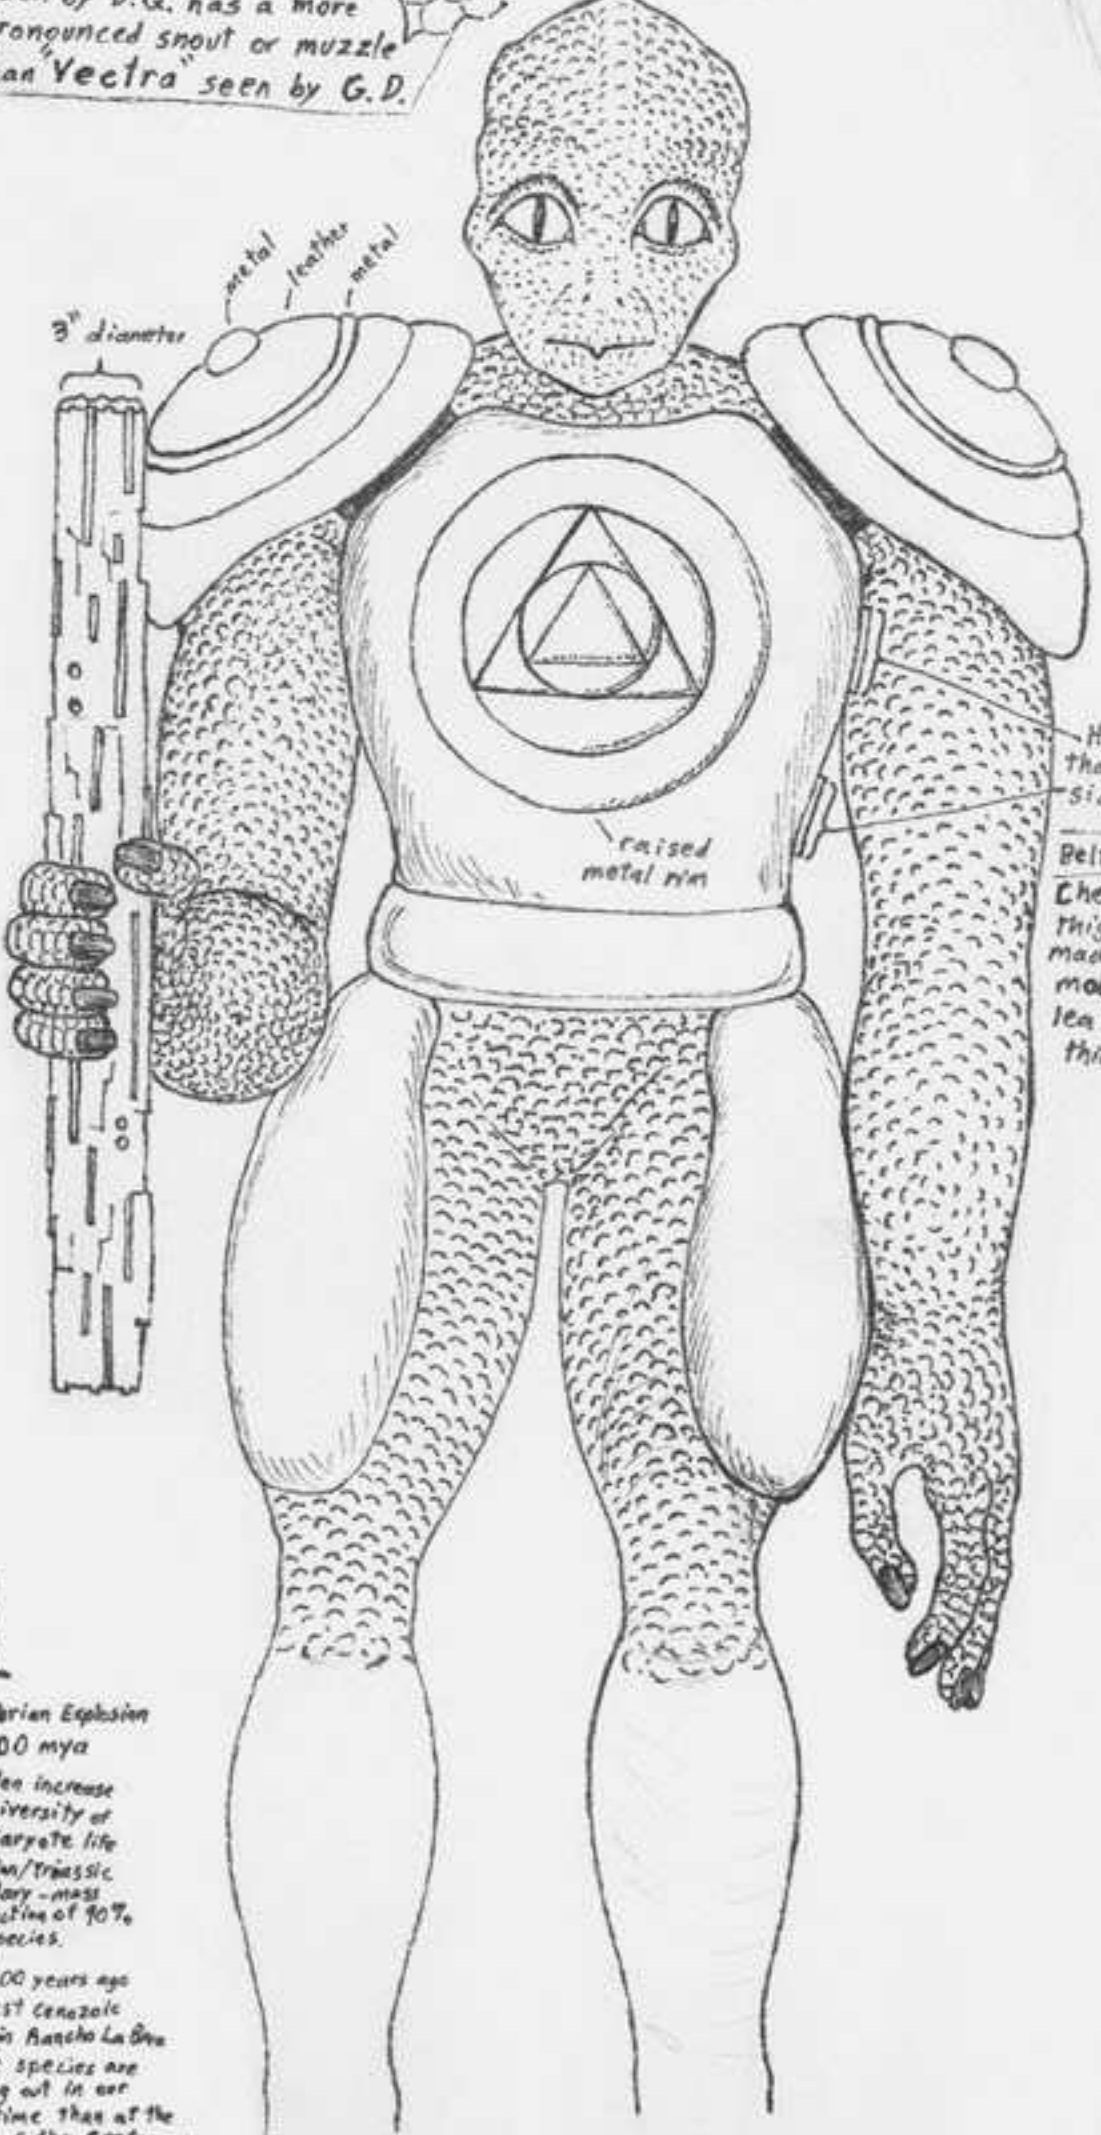

Tough leathery skin - like bumpy leather not as scaly looking as my previous illustrations. Like skin on top of iguana's head & neck.

The reptilian had larger bumps on the top of the head, the neck, the shoulders (bumps get smaller going down arms), the hips & the front of the thighs. Prominent bumps in all well-lit areas. Areas in shadow seemed to have smaller bumps.

Small sense organ (olfactory?)

1995

David W. Chace

Has straps that go around side to back plate.

Belt is metal
Chest plate and thigh protectors made of set-pressed molded-seamless leather ~2.5" or 3" thick.

raised metal rim

"Vectra" has a strange combination of human and reptilian features.

Large gnarled hands
5 fingers with large knuckles
bumpy scales
no webbing was visible between the fingers although it would have been hard to tell for sure.
Long, wide, dark brown rectangular fingernails
Not pointed claws.

Drac - B.H. says the claws are ≈ 1 inch long ~ 1.5 inches - Drac resembles "Predator" from the Schwarzenegger movie - but with a reptilian head
 B.H. did not notice any webbing. The Dracs do not smile.

Composite Description:
 Large eyes with catlike pupils.
 Protruding lizardlike snout.
 Scaly, greenish skin.
 Muscular body. $\sim 6'$ tall.
 4 fingered hands - or 3 fingers and 1 thumb with dark claws $\sim 1.5"$ long. Possibly some webbing between the fingers.
 Narrow waist in proportion to chest. Mechanical movement.
 Aggressive behavior.
 Long arms. Reaches out.
 Eyes almond shaped & slightly slanted.

- How large is the cranium?
 - What does the neck look like?
 skin may be lizard-like or crocodile-like.
 - what is the appearance of the brow areas, forehead, scapula & skin fold patterns?

In addition to the "Draco soldier" types are there reptilian types which more closely resemble the little Greys?
 skin is wrinkled around the eye.

Vectra? Draco?
 Bent forward posture
 Narrow waist
 Thick Thoracic cavity & Thighs
 Powerful Limbs
 Wide Shoulders
 Beaklike snout with fleshy appendage
 dangling from upper jaw
 Muddy green, dry, scales.
 Birdlike or Lizardlike talons.
 Head a little larger in the back than a human head.

Eyes are large, rounded, oval, or almond-shaped, w/ slit or starburst pupils and yellow irises.

J.S.C. says this hand is accurate - the webbing may be even more obvious.

Based on face on p. 96-8 of Matrix II, somewhat resembles a lizard embryo - has that neonatalized look. - Particularly the "snout" area.

Reptilian Types

This mouth looks too "smiley"

Kraton has a serious look although protruding snout does give mouth a curve - a perpetual smile.
 forehead a little bit higher & more pointed than originally drawn - with a barely visible ridge or head-crest

Eyes not so wide open - more of a squint - with lid partially closed over eye.

Larger Scales on head & face than shown.

Protruding 'V' shape to powerful lower jaw.

Kraton
 Powerful jaw muscles
 Head resembles a Teenage Mutant Ninja Turtle
 Yellowish, greenish skin?
 Nostrils small, as shown, but slightly lower - slightly closer to tip of the snout

Kraton's mouth does curve like a smile because of protrusion of muzzle.

Linda Moulton Howe says the reptilian types are often 6 and 7 feet tall.

John S. Carpenter says the neck may not be as thick as shown here and they definitely don't smile. The mouth is like a lizard or snake. He also says that some have a ridge down the forehead.

J.S. Carpenter says this face is fairly accurate and that in one case the snout may have protruded even further. Cross-hatching is a good technique for representing the scales.

John E. Mack says that by and large the reptilian types seem very mechanical - robot-like - and unemotional. They may be more muscular than the Greys.

Based on p. 96-8 of Matrix II by Valdemar Valerian

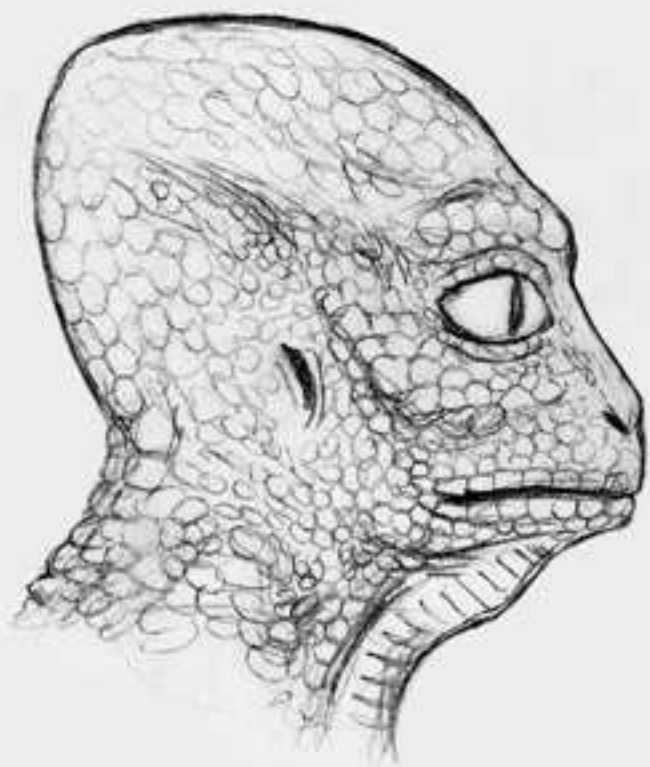

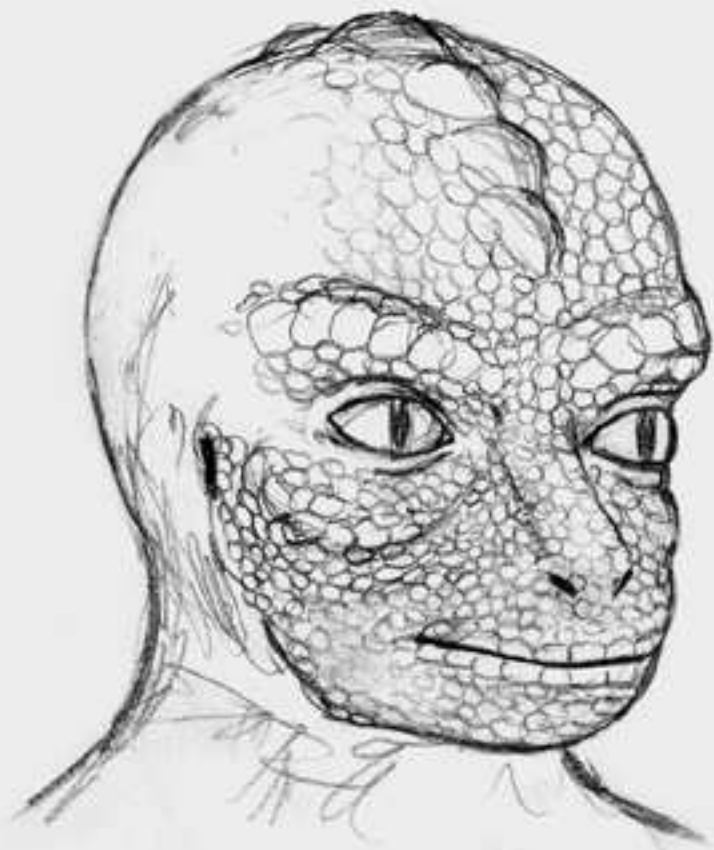

Source: DQ. 7-1-94
 Feet: Has humanoid foot w/ ankle knobs heel, arch & ball to the foot but foot is stockier than human in keeping w/ large mass & height.
 ~ 4 toes, no little toe
 Some webbing - toes not small or well defined.
 Not distinctly pronounced - separated like human toes.
 Claw appears longer than part which sticks out.

"Clublike" feet
 Pronounced - separated like human toes.
 Claw appears longer than part which sticks out.

Based on face shown: UFO Coverup Live.
 - Reptilian features added to interpretation of Barney & Betty Hill's alien.
 - Profile resembles Vectra.

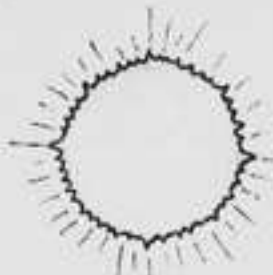

Draco "soldier"

B.H. says the above face is accurate, but the pupils are only $\sim 1/4$ as wide as shown. EYES are $\sim 1/2$ the size of the snout. Also may have been more like a lizard.

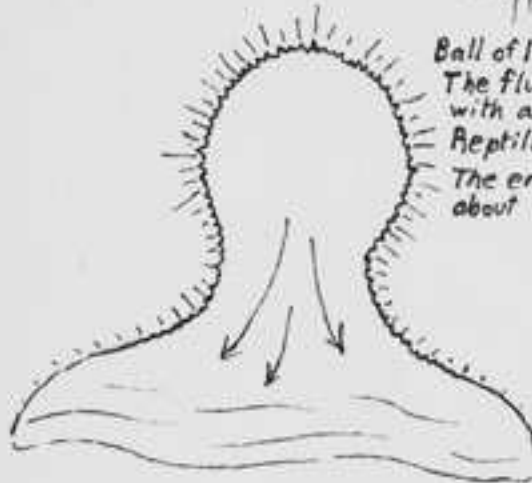

C.S. was taken into a very functional, Spartan room w/ a window, control console, computer panel & exam table. The seats at the console were slabs on pedestals.

~ spherical
Opaque white ball of light
a little bit smaller than a
bowling ball.

Ball of light cracked open like an egg
The fluid white light flowed down
with a "shhh" sound as the
Reptilian's body materialized.
The entire process took
about 2 seconds.

~ "S" shaped curved ear slit
~ 2 inches long & ~ 1/4" wide

eyes not slanted

Skin color - a touch of chromium oxide green
burnt sienna ~ green-grey-yellow-brown
yellow ochre
titanium white
khaki "green" w/ yellow cast
Ridges are darker - not lighter - actually less yellowish
~ 1 or 2 inches away from the central ridge
there is a subtle color/shade change

ridge ~ 1/8" high & ~ 1/2" wide
goes all the way down the back
at least as far as the waist
there is a small secondary ridge
w/ small scales on each side of
the main ridge

Approximate physical appearance
and scale pattern of Reptilian species
encountered by C.S. ♀

- Reptilian male - Based on session 4-2-95
April 2nd, 1995
Muscular physique ~ 6ft. tall
Seen with Greys

The Reptilians are an old, domineering, warring race - cold, calculating - do what they have to do
Earth humans are animals - the mutts of the universe.
and don't bother to hide
the traumatic encounters
behind pleasant screen-memories.

Largest scales on top of head, on neck, jowls and body
Smaller scales on face, eyebrows/eyelids, face and chin
Smaller scales on nose - on top of nose & between the eyes
Smaller scales at top edge of eyeball and on paired secondary ridges
Tiny beadlike scales under lower edge of eyeball, nostrils and around the mouth
Color: Khaki-greenish-brownish-greyish w/ touch of yellow ochre
Ridges are darker khaki rather than light yellow ochre-khaki of surrounding scales

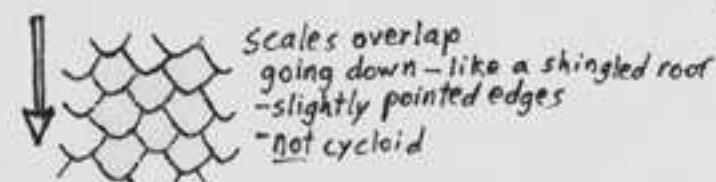

no crease demarking eyelid
- just a subtle indentation

1) yellow ochre
2) titanium white
3&4) a touch of chromium oxide green and burnt sienna

no vertical iris - brilliant sun yellow - canary yellow
w/ very tiny tiny red flecks scattered underneath
Sclera - not white but pale pale cream

small slit opening - black inside
~ 1" long and ~ 1/4" wide
located between eye and nostril

Smooth, soft scales, cool to the touch - like snake skin
Beautiful scale patterns - like a mosaic of tiles & fine beadwork

labial scales
row of scales under eye - resemble fine beadwork
scales under nostrils - shiny, black - much smaller and
rounder than surrounding scales

Four cords - like thick tendons - run down the neck
Outer cords run into the shoulders
Inner cords run down to the top of the sternum ~ 9 inches long
Only the inner cords have small secondary ridges on the sides w/ small scales.
The chest is covered by a hard breast-plate resembling a turtle's carapace.

There was a sound of static electricity
just prior to Ruby's manifestation
The time it took to complete the materialization
(decloaking?) and become fully opaque was
~10 seconds or less.

When she first appeared she had her hooded
head bowed, hiding her face, and her arms
crossed to hide her hands. When asked if
she was a master teacher she responded
"you may address me as such." - Being deceptive, hiding her fear
and anger which soon became apparent.

Ruby

Large deep-set eyes

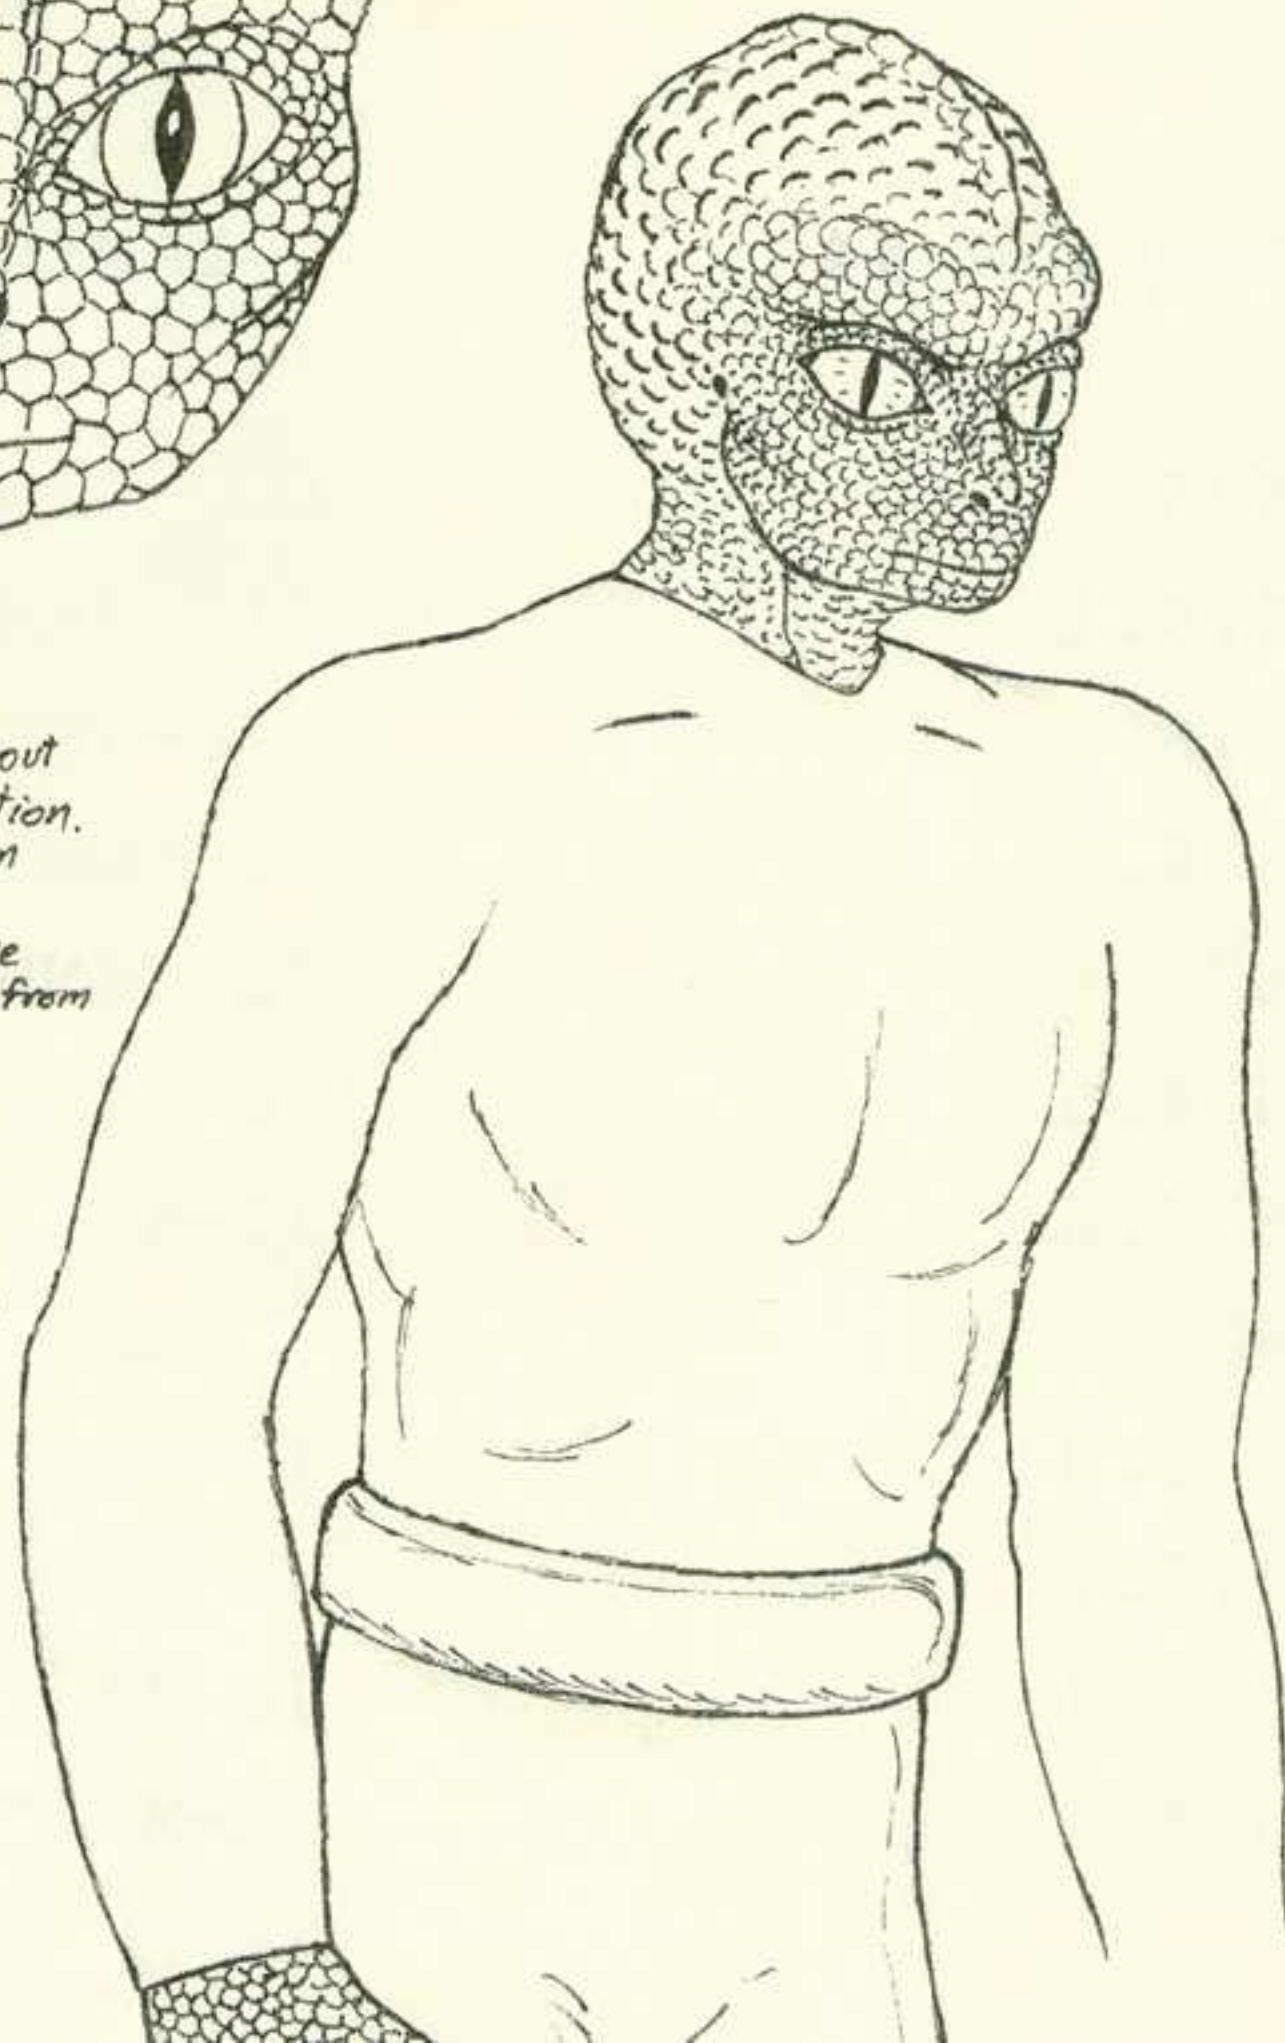

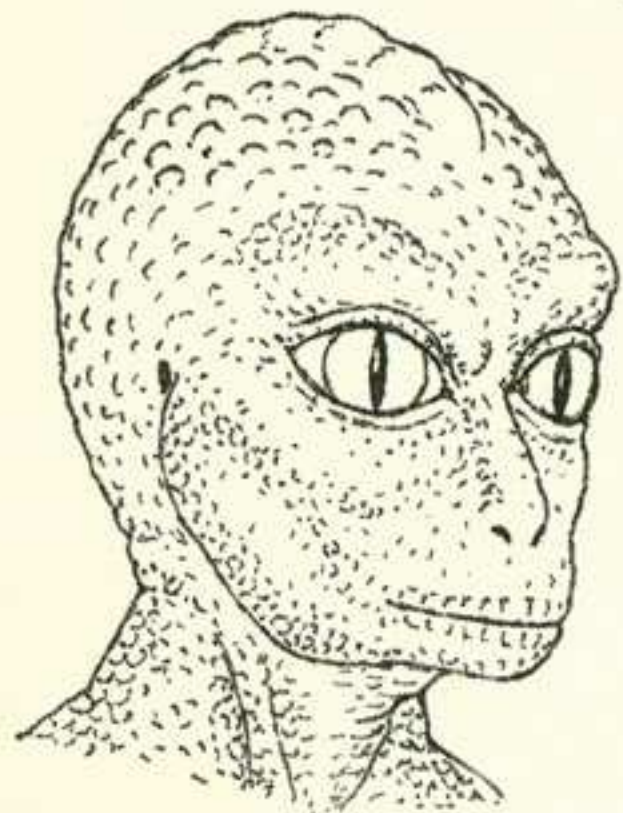

Slightly protruding reptilian snout

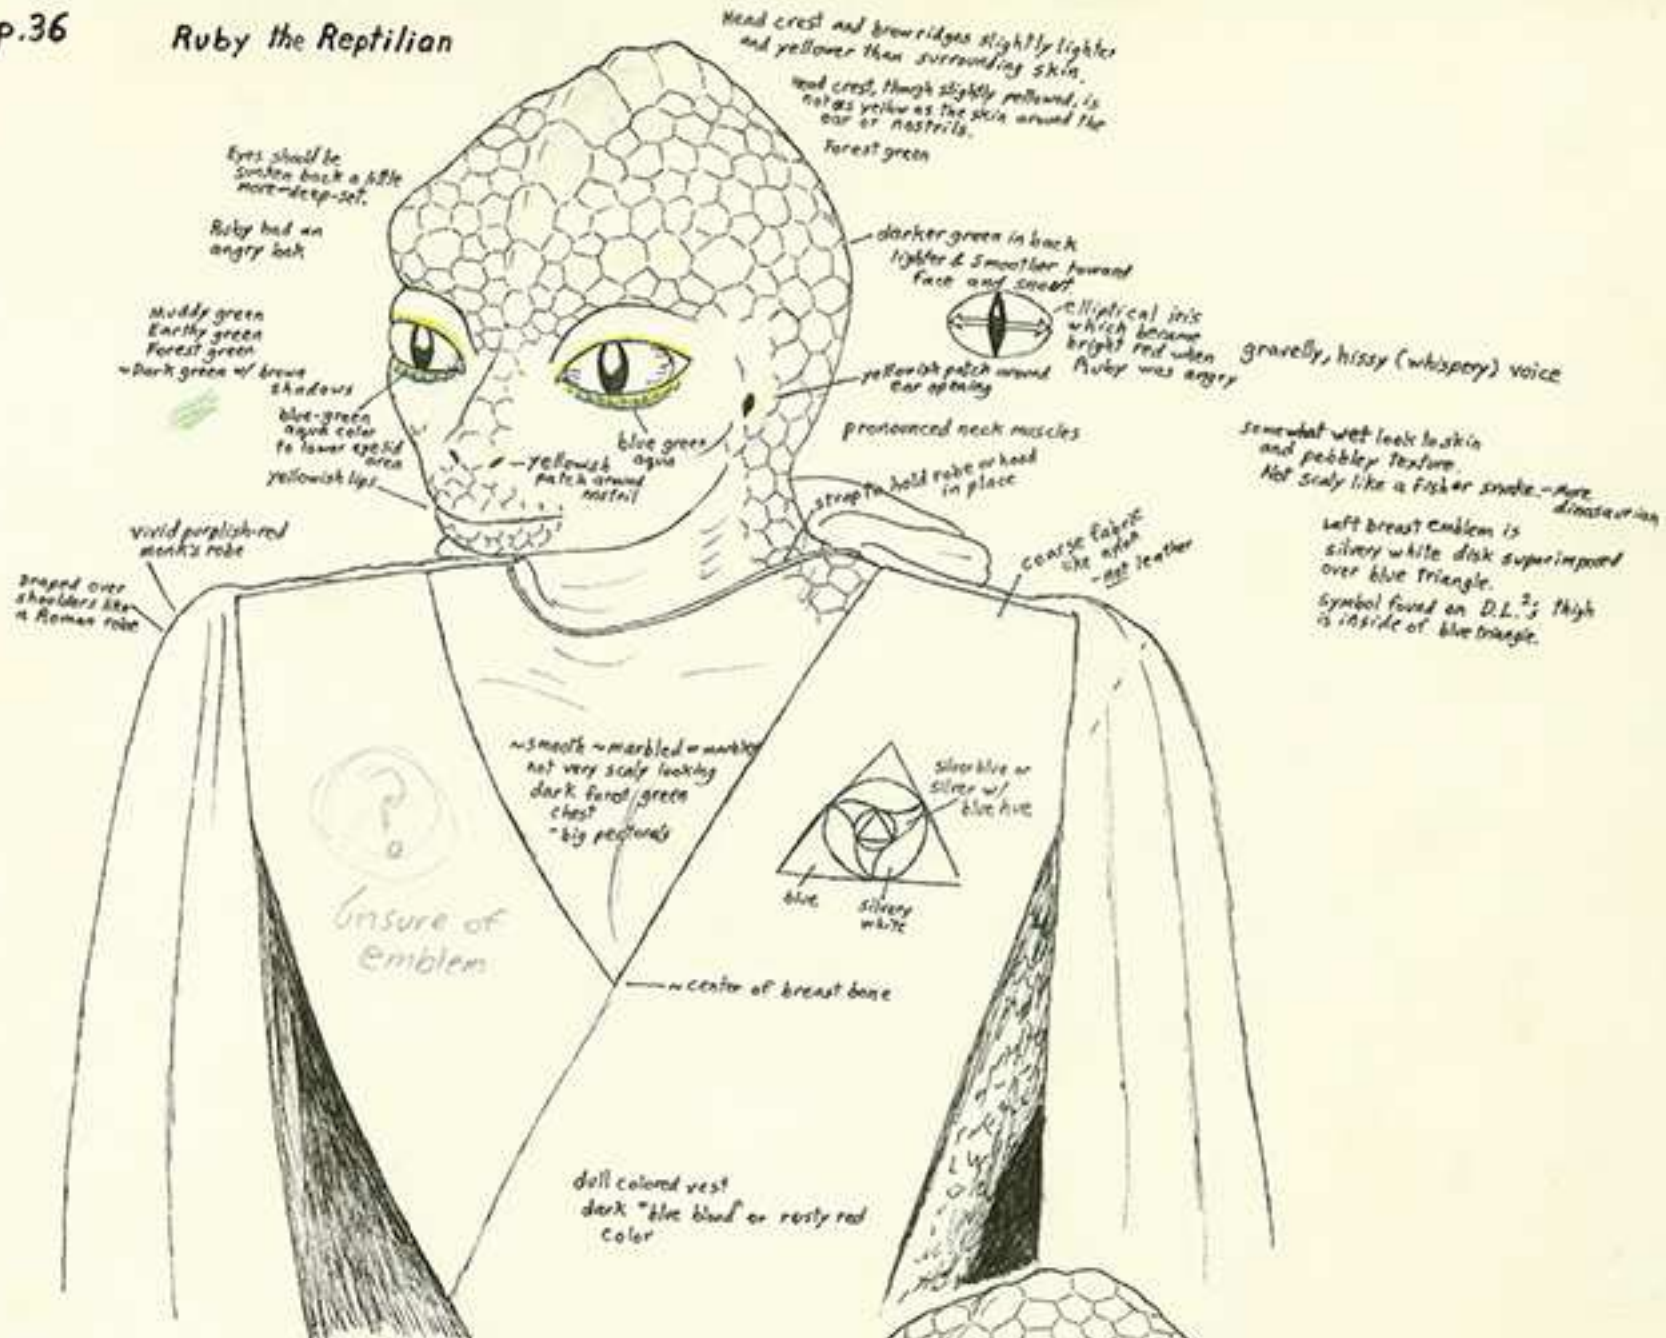

Bumpy or scaly skin, smoother on the face, especially toward the snout and lip-labial area. Marbled scalation.

Subtle head ridge or crest—beginning on forehead above prominent brow ridges. Scales do not actually overlap but give the appearance of being directed away from the face/snout.

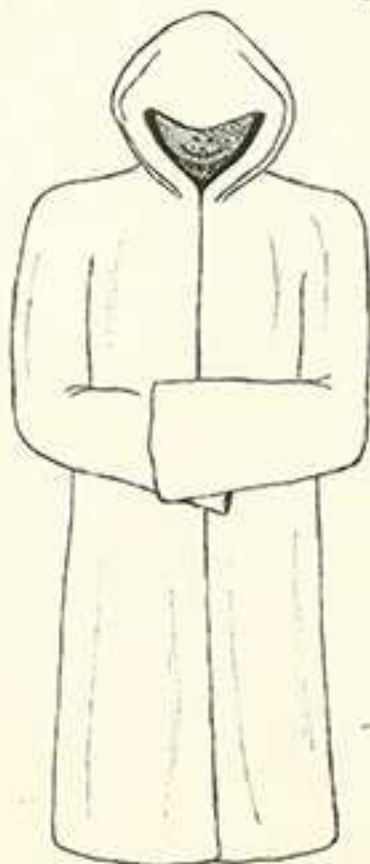

Common Features of Reptilians

- Eyes larger than human eyes
- Oval or almond shaped—not very slanted
- Iris bright yellow or red
- Pupil catlike, a vertical slit
- Blunt lizardlike snout which protrudes only slightly farther than a human nose
- Subtle ridge running down forehead
- Hole or slit for ears and nostrils

J.V. interviewed Jan. 10, 1998 regarding an incident that occurred ~November 1995 on the Redmond Plateau - an area that is fairly populated now, but was woodsy back then. About 9:15pm one evening - it was dark with a light fog - a thick atmosphere - bordering on rain. J.V. is riding along on his motorcycle when he gets a paranoid feeling through his arms and his whole body. He saw a short stocky hairy being that tripped crossing a ditch -almost fell forward across the ditch and broke his (its) back, while J.V. was driving by on his motorcycle. - J.V. also looked back at this creature in his rear-view mirror as he was riding away - (got a view of the creature's back?). The sight of this being "scared the sh*t out of me." The being telepathically projected to him a strong message/impression - "It was such an impression that it was almost words." J.V. could formulate the words in his mind:

"You are not really seeing me, are you?"

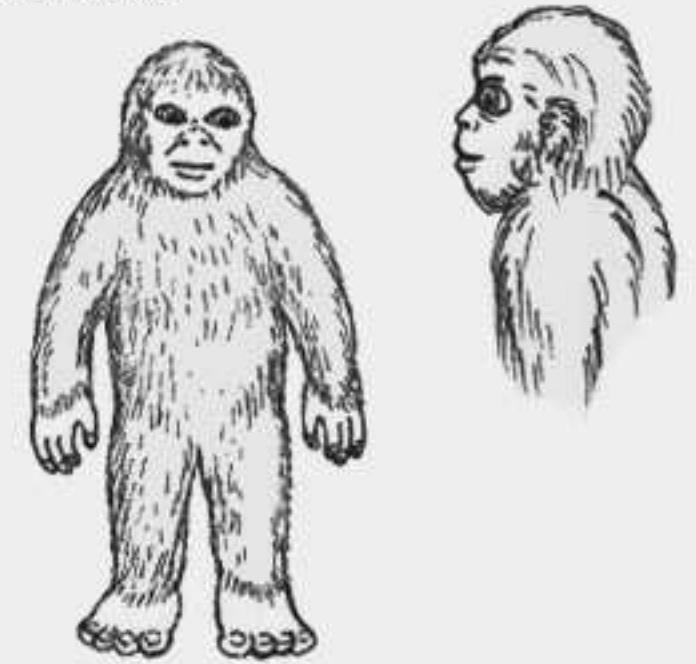

The creature was about 3 ft. tall (actually it may have been more like 3.5 to 4 ft. tall) with big eyes -kind of yellow - projecting this message to him. Compare it with the image on p. 43 of A Visual Guide to Alien Beings. The stocky being was somewhat more square - especially through the shoulders. The being was stout-pug, with huge eyes and a child-like face. The being had long hair like a beard around the face. The being was very thick, hairy, stout, stocky.

Seemed friendly as individuals, and advanced, but their agenda may not be. Lightning fast movement and powerful - a strong little speed demon. Hairs maybe 5 or 6 inches long. J.V. could see bare skin on fingers and toes - maybe some on hands and feet. Back of head more straight down and spine a little less curved than images on p. 43. Dark brown - tinge of orange to outside hair -surface hair.

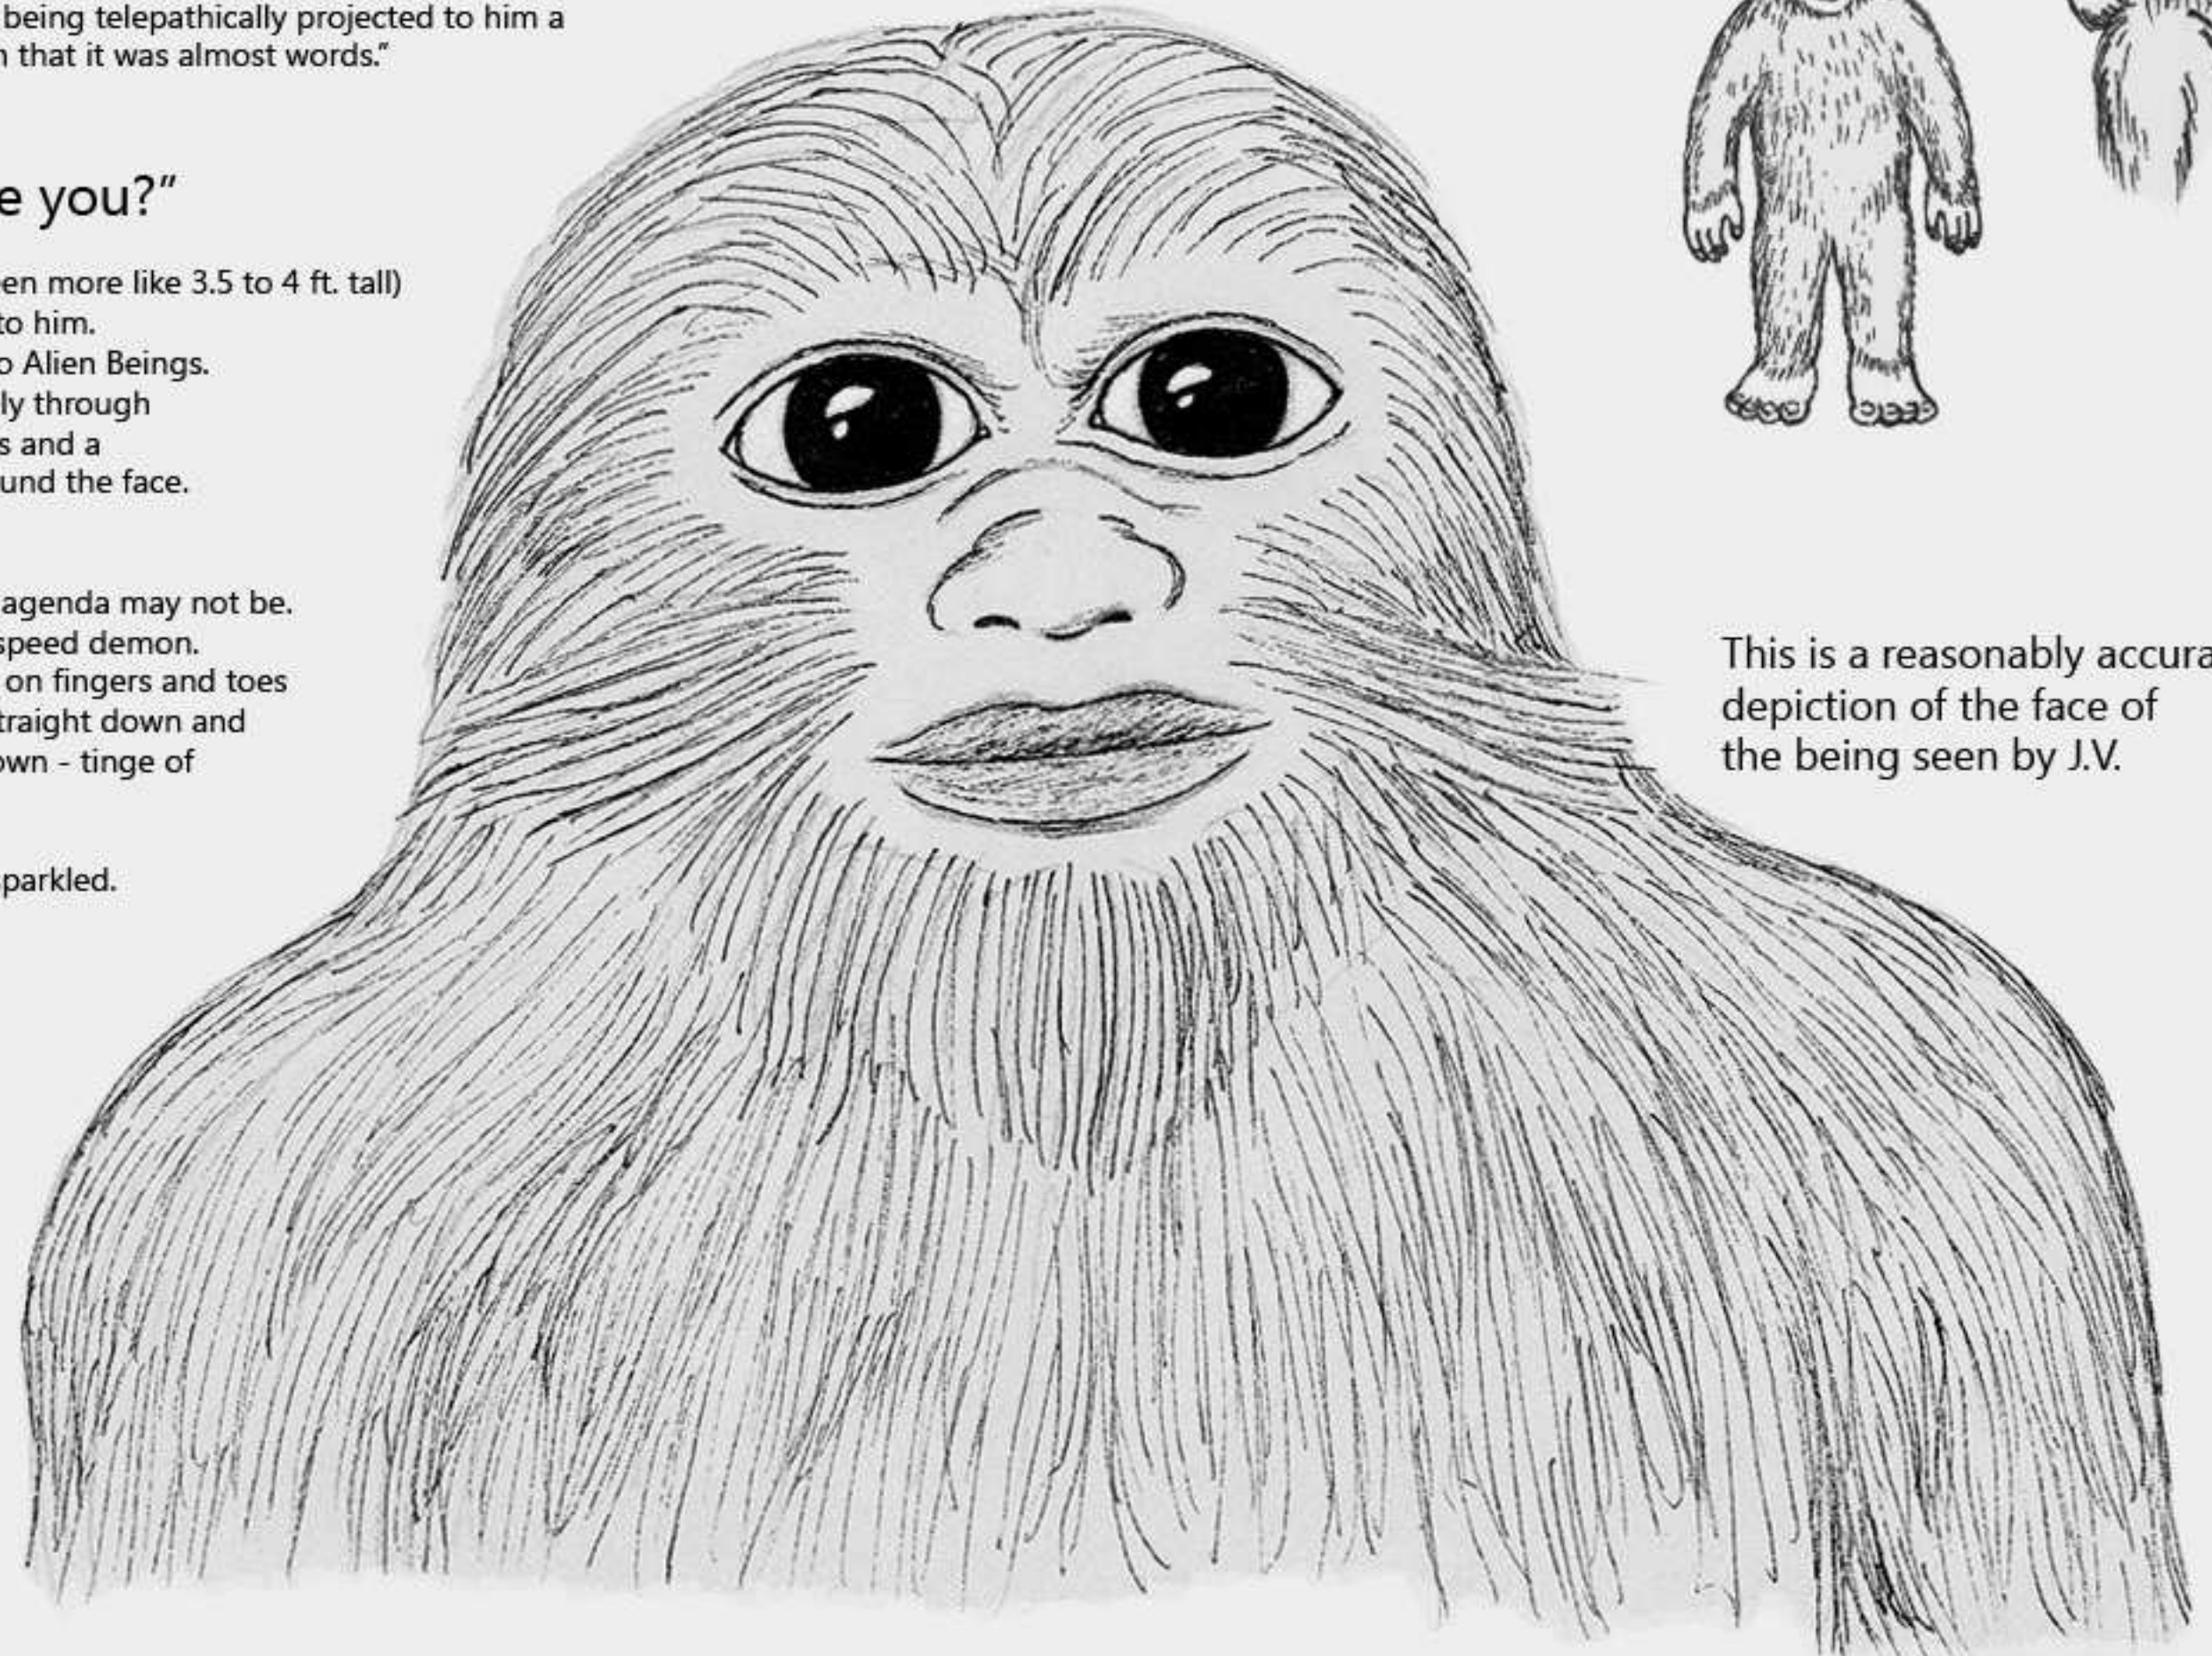

Round black pupil, iris was "good and yellow" - bright, sparkled.

This shadowy black energy creature stood about 9' tall. It had to bend over to stand in the child's bedroom. The body was curved in the armpits and not as sharply defined as would be expected of a physical being. The head was small in proportion to the body. The eyes glowed white. The being moved as if in slow motion and seemed electronic. This bedroom visitation occurred in 1969 or 1970 to a 5 year old boy. The creature carried a black cube or box which seemed electronic. The boy's mother felt the creature intended to harm him with the box. When she told her son that the being could not harm him it disappeared with a rapid shift of energy. No flash of light or obvious special effects.

Reticulum: Update

Blond female human-looking entity who put Travis Walton unconscious. Based on an illus. by Mike Rogers in Appendix III p. 309 of UFO Contact From Periculum: Update by Wendelle Stevens

Coarse, brownish-blond hair. Longer than the men - past her shoulders. Smooth, blemishless skin. Bright, golden-hazel eyes. -were no make-up. -Aged mid to late-twenties? -Full figure. -Velvety blue uniform fit very tightly on upper body and upper legs - slightly looser on lower legs. -Attached or tucked loosely into soft, black, moccasin boots. -Black waist band. She stands ~6' tall and has a deep, even tan.

Brown eyes, human-like.

Nose is like a modified Gray's nose more than like a human nose.

Thin lips, slightly pinker than surrounding skin.

Rounded ~human-like chin.

Their hands were completely human - even w/ a little hair on the back, but the fingers were, perhaps, slightly long and the human-like fingernails were pointed.

Head nurse, ~6 ft. tall.
Authoritative toward others.

The head nurse wore a dark purple or blue violet nun's habit.

Eyebrows are dark brown or black.

Her sparse eyelashes are barely visible.

Her nose is small, human-like, and slightly Negroid.

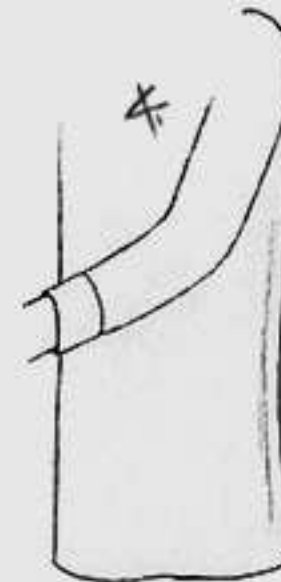

Her nose is smaller in proportion to her face than that of the Nordic female seen by Travis Walton (based on Mike Rogers' painting).

Her mouth is short, w/ ~human-like, but thin lips.

She has sharp cheek bones and a pointed chin.

Dark skin - almost like a black person.

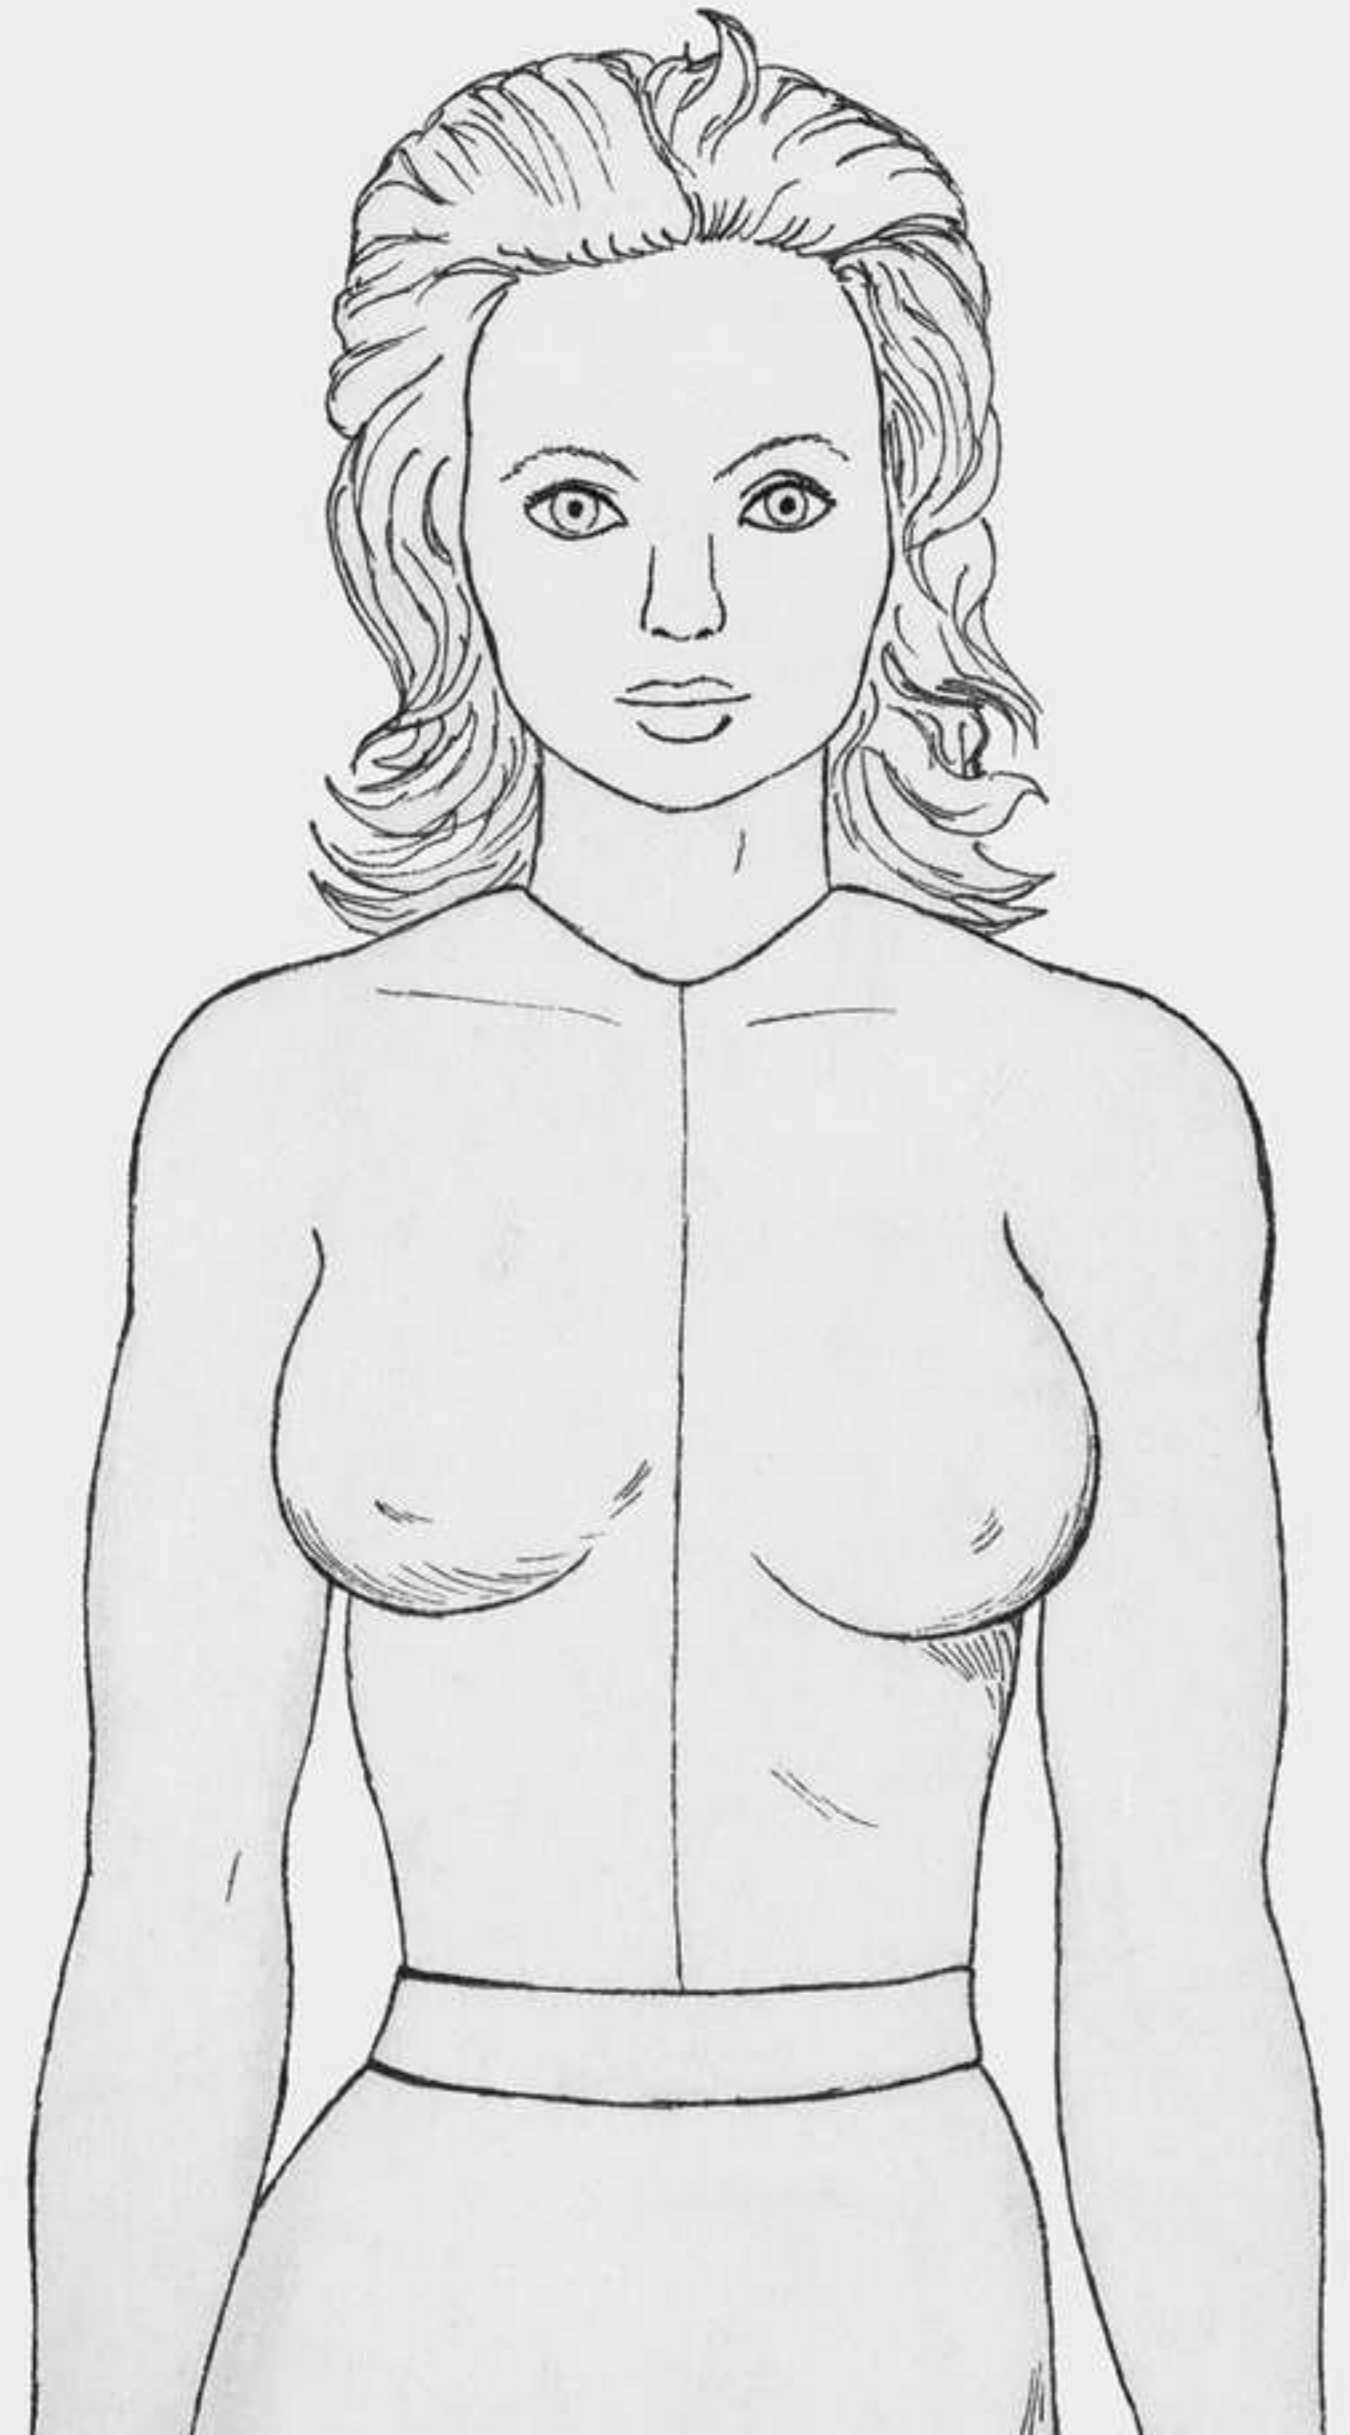

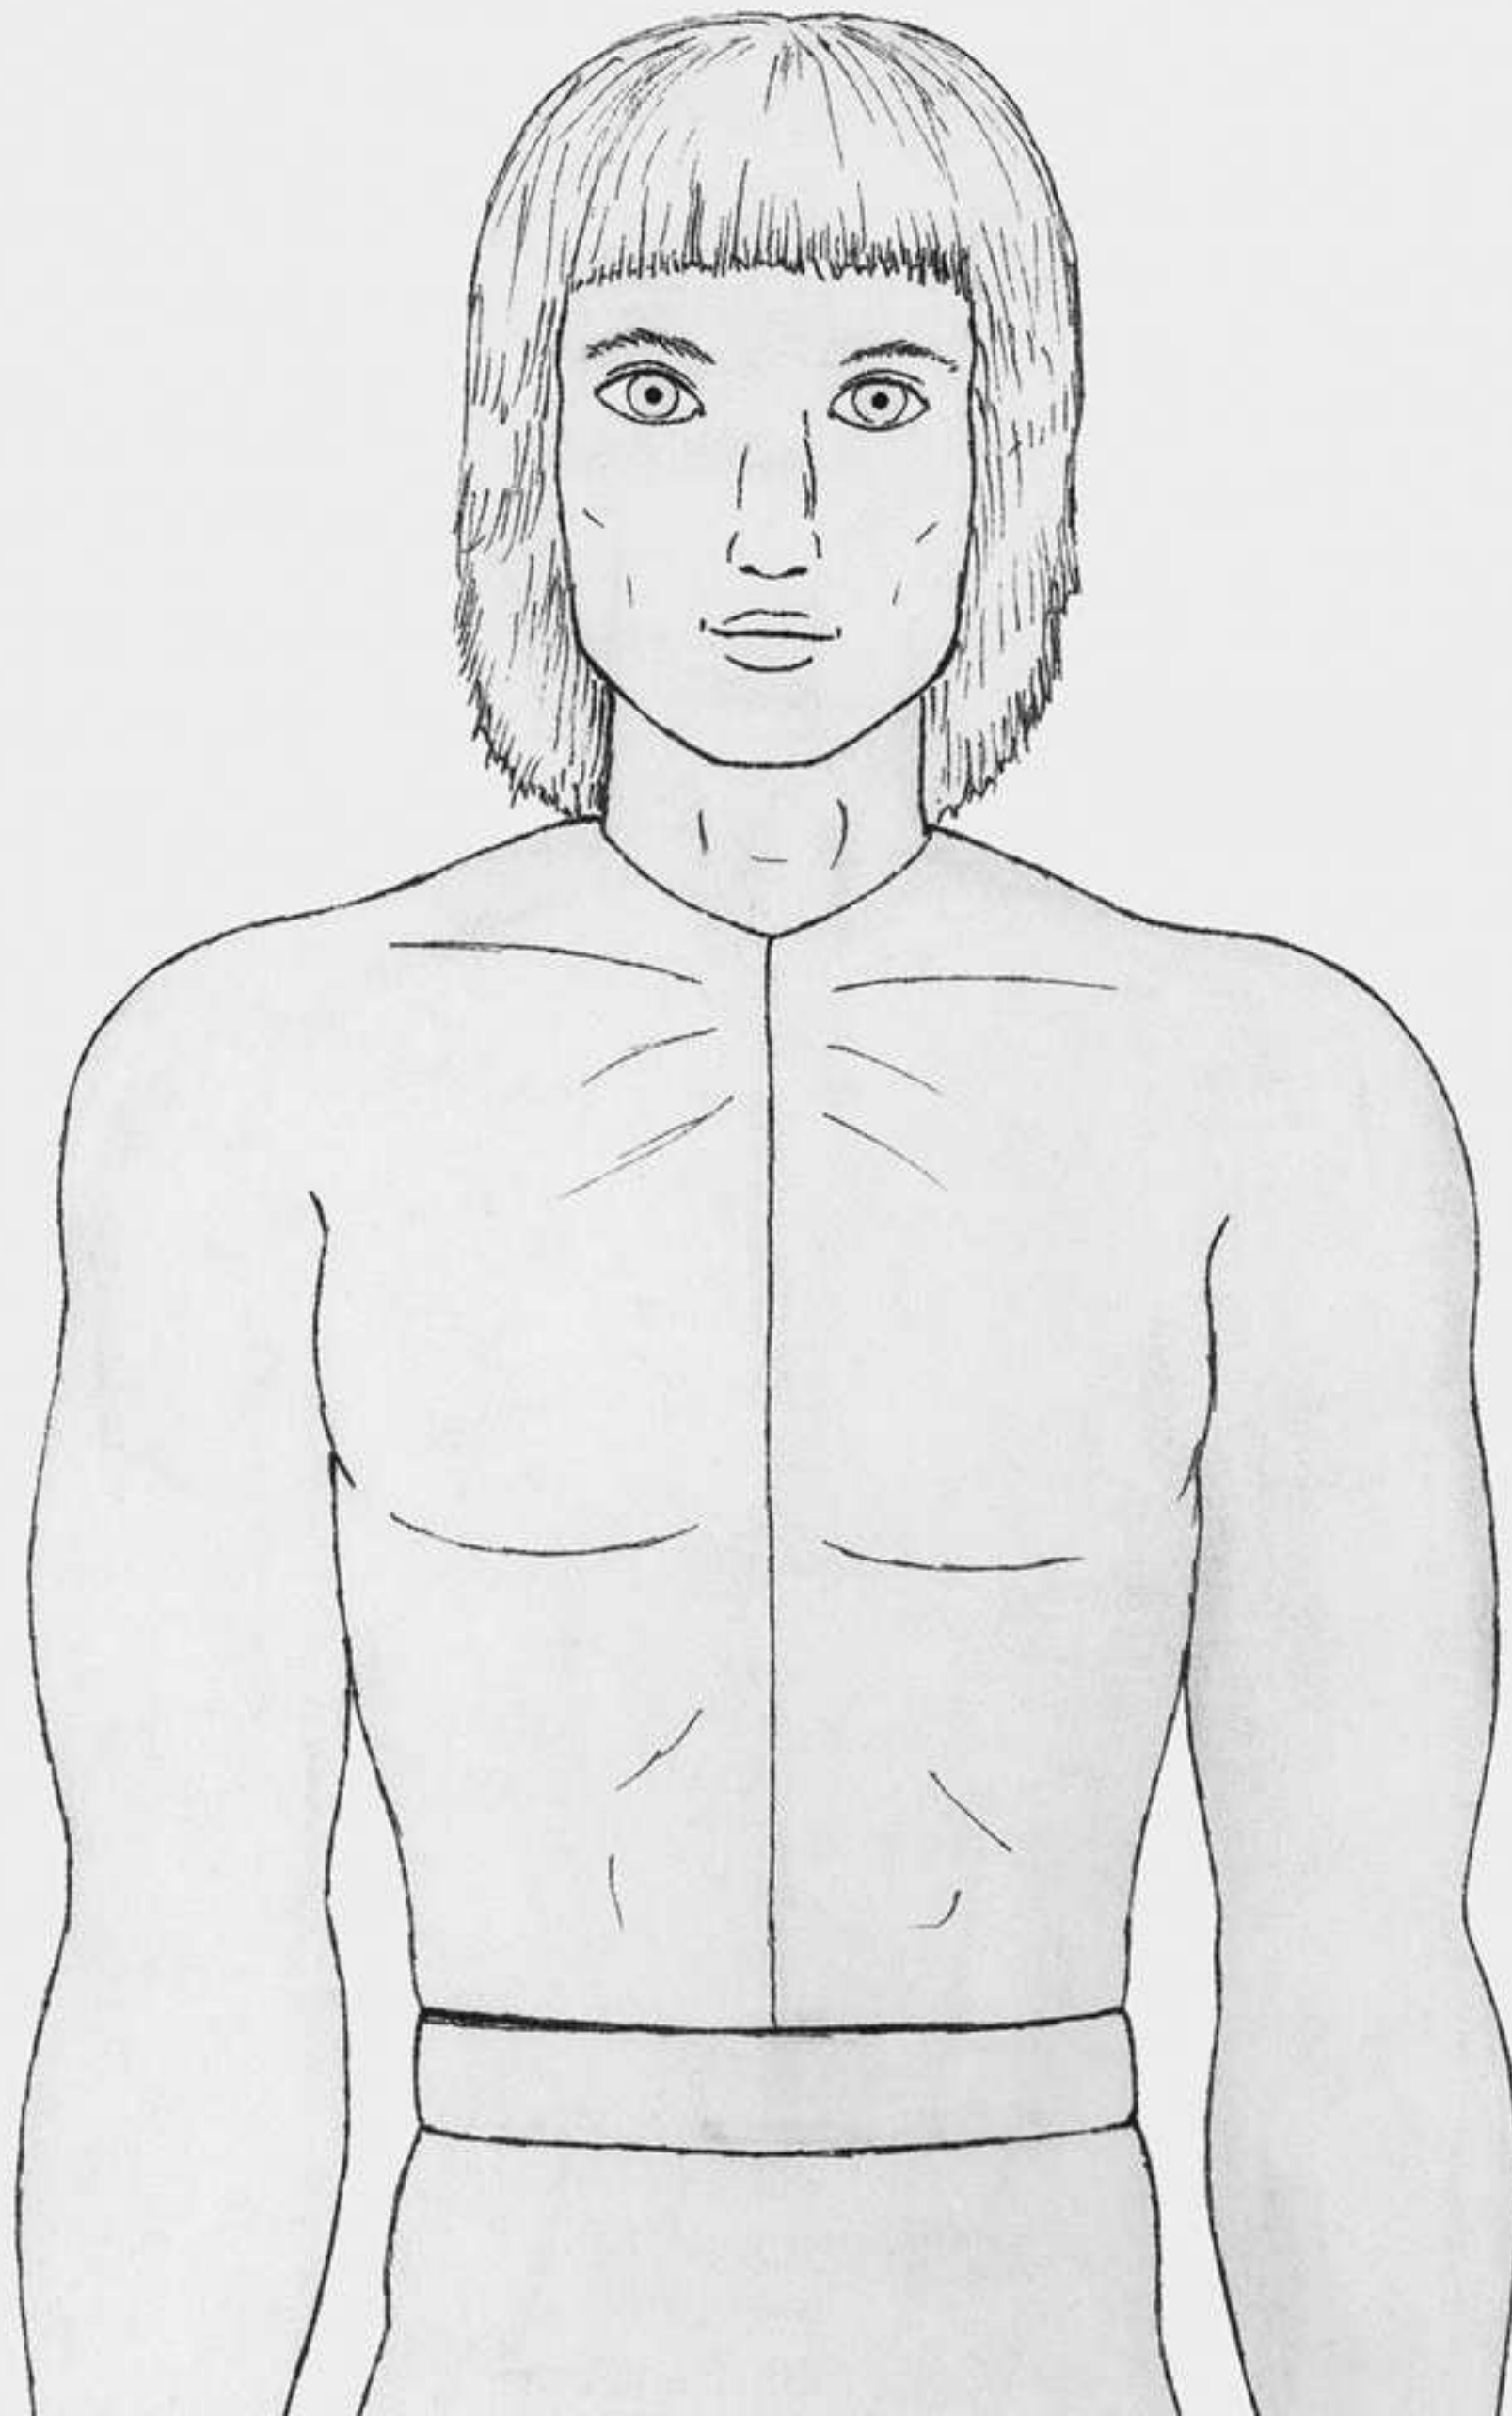

She has very small breasts.

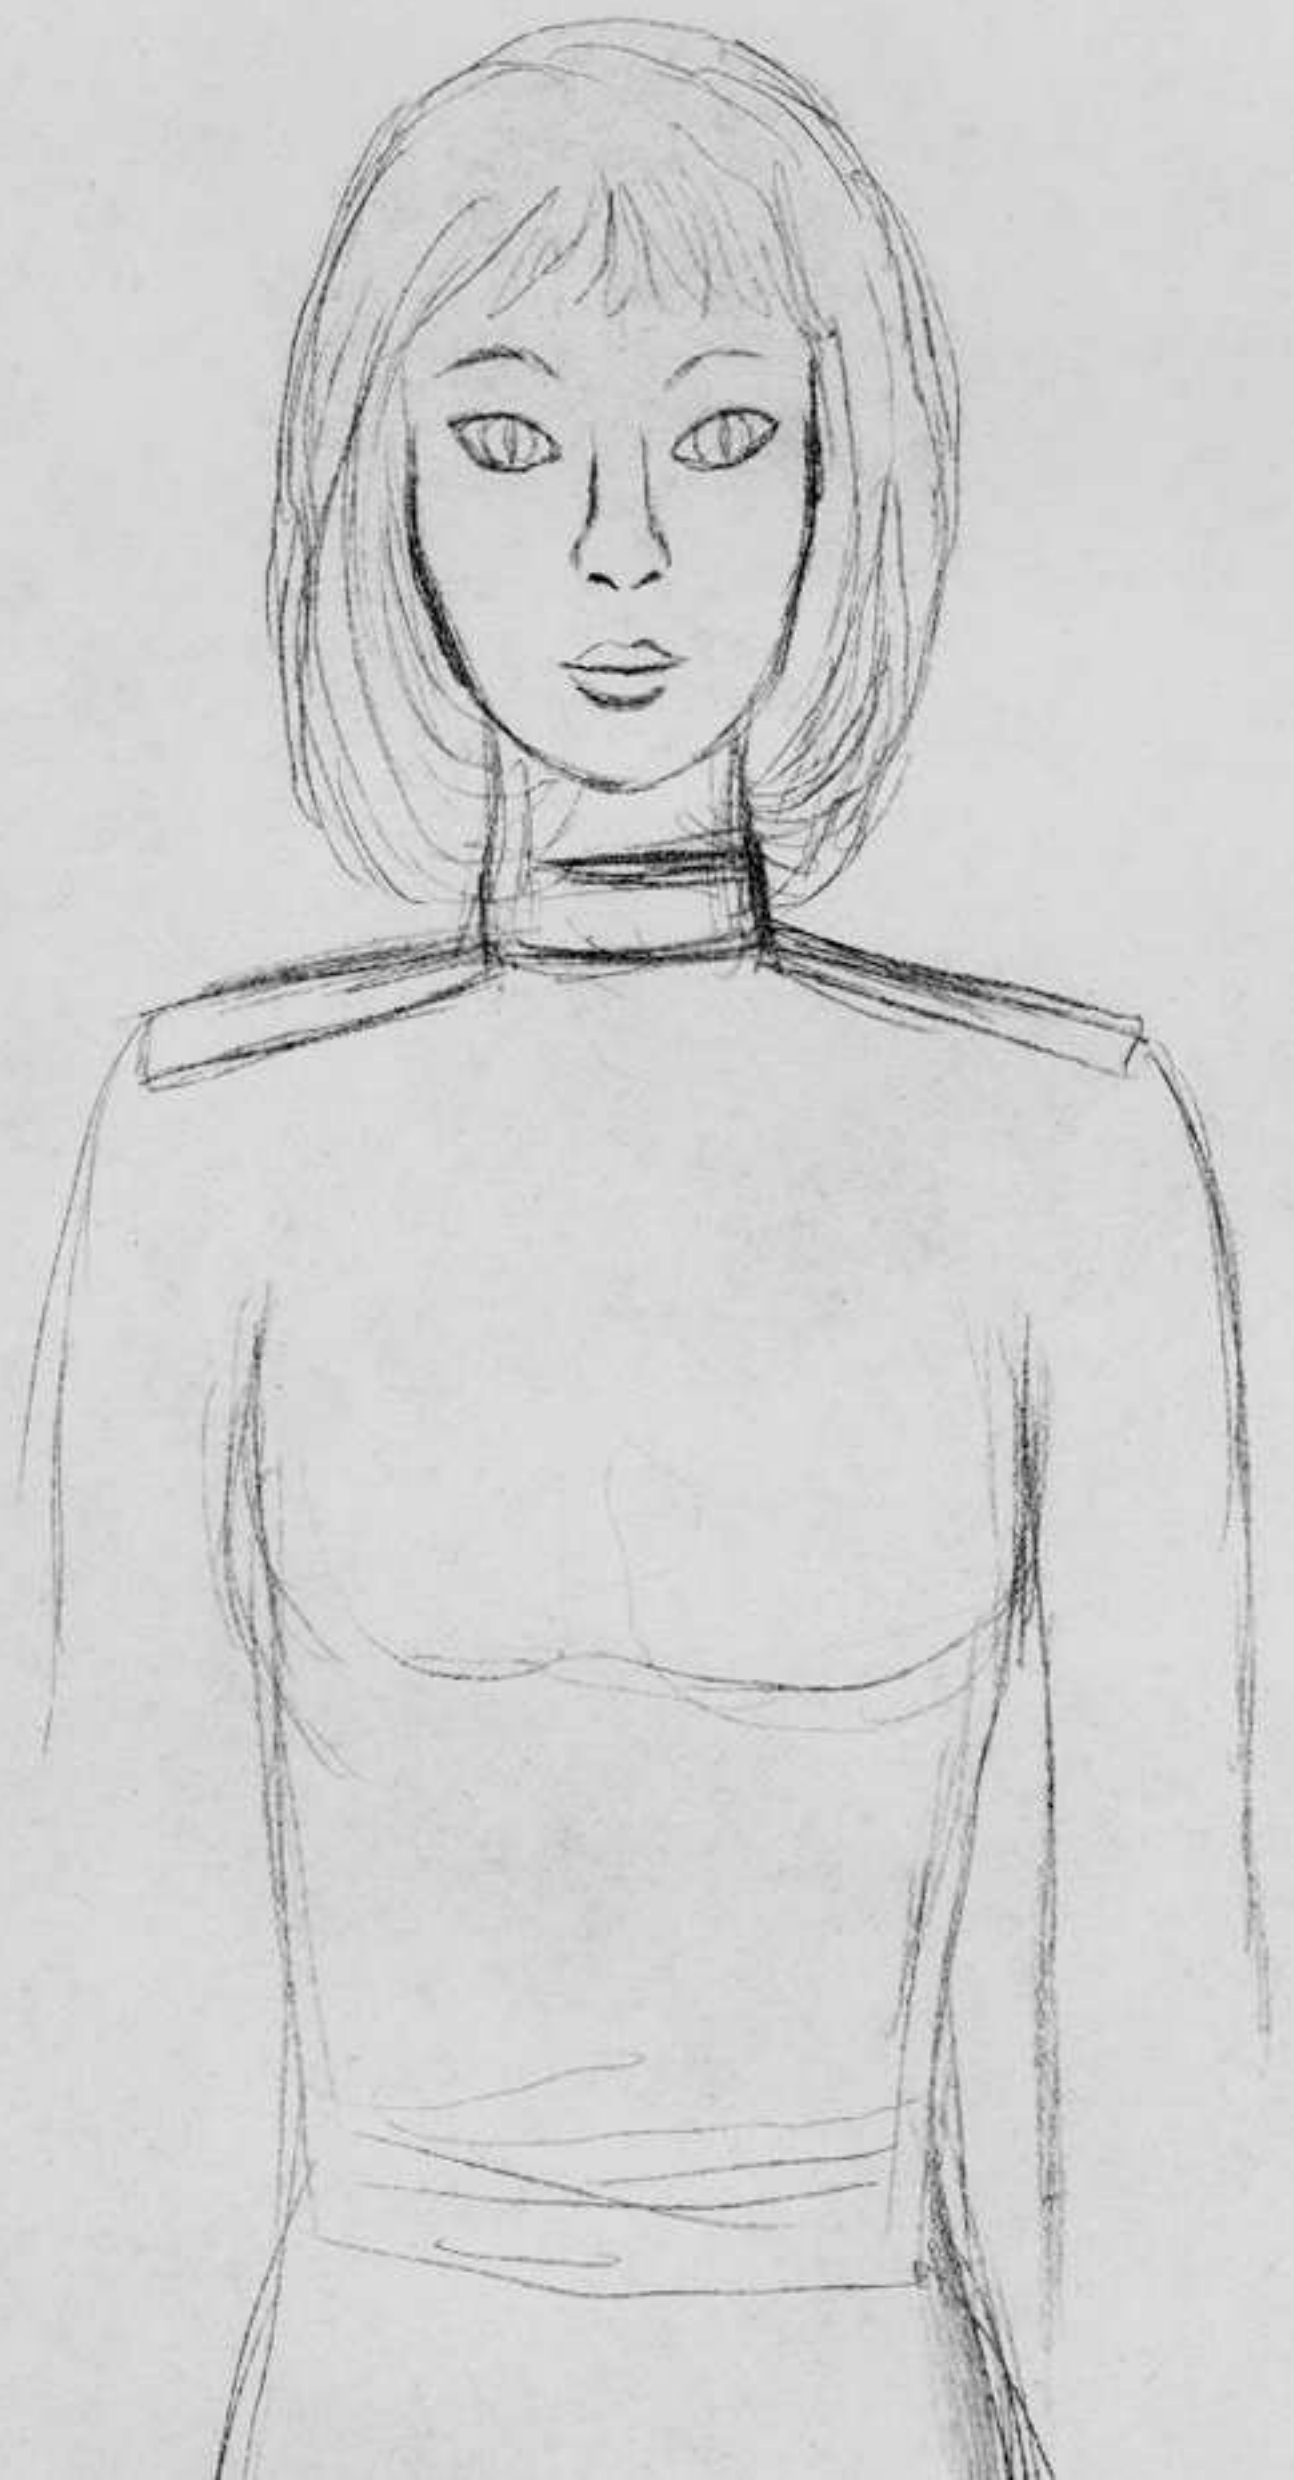

Her gown goes down to just below her knees.

Black metallic piece -all one piece? that attaches to her gown.
